CIPHER

Act Compliance Services Data sheets

# Cyber Resilience Act Compliance Services

## Executive Overview

Navigating the European Cyber Resilience Act (CRA) has become critical as organizations across Europe, the Middle East, and Africa face significant new requirements for digital product security, compliance documentation, and vulnerability management processes. Manufacturers, distributors, and importers struggle with understanding CRA obligations, implementing compliant security-by-design practices, and establishing conformity assessment procedures. In response to these challenges, Cipher offers comprehensive Cyber Resilience Act Compliance Services, providing specialized expertise to help organizations understand, prepare for, and demonstrate compliance with this landmark EU regulation across the EMEA region.

# What's Included in Cipher's Cyber Resilience Act Services?

1

## CRA Impact Assessment

Comprehensive evaluation of how the Cyber Resilience Act affects your products, supply chain, and business operations

2

## Product Classification Analysis

Detailed assessment determining which CRA category applies to your digital products and connected devices

3

## Security Requirements Mapping

Translation of CRA essential requirements into specific technical controls and development practices

4

## Conformity Assessment Support

Expert guidance through self-assessment or third-party certification processes based on product risk category

5

## Vulnerability Management Enhancement

Development of compliant vulnerability handling and disclosure processes meeting CRA requirements

6

## CREST-Accredited Methodology

Industry-leading compliance approach validated by CREST's rigorous global certification standard

CIPHER

Act Compliance Services Data sheets

# CRA Compliance Services Portfolio

## 1 STRATEGIC CRA ADVISORY

### CRA Applicability Analysis
Determination of which products and components fall under CRA scope

### Risk Category Classification
Assessment of whether products fall into Class I, II, or critical categories

### Compliance Roadmap Development
Strategic planning for achieving and maintaining CRA compliance

### Gap Assessment & Remediation Planning
Evaluation of current practices against CRA requirements

### Business Impact Analysis
Assessment of how CRA affects business operations, product development, and market access

## 2 TECHNICAL CRA IMPLEMENTATION

### Security by Design Integration
Implementation of security requirements throughout product development lifecycle

### Product Security Requirements
Development of technical specifications aligned with CRA essential requirements

### Vulnerability Management Processes
Creation of compliant vulnerability handling, patching, and disclosure procedures

### Security Testing Frameworks
Implementation of testing methodologies validating CRA security requirements

### Technical Documentation Development
Creation of required technical files and compliance documentation

## 3 CRA CONFORMITY ASSESSMENT

### Self-Assessment Support
Guidance through internal conformity assessment process for Class I products

### Third-Party Certification Preparation
Readiness assessment and preparation for notified body evaluation for Class II products

### EU Declaration of Conformity
Development of compliant declarations meeting CRA requirements

### CE Marking Implementation
Guidance on proper application of CE marking for CRA-compliant products

### Post-Market Compliance
Ongoing monitoring and maintenance of compliance throughout product lifecycle

## 4 SUPPLY CHAIN CRA COMPLIANCE

### Supplier Assessment Framework
Development of methods for evaluating supplier CRA compliance

### Distributor & Importer Requirements
Guidance on fulfilling specific obligations for distribution chain actors

### Component Compliance Management
Approaches for ensuring compliance of incorporated components and systems

### Cross-Border Compliance Strategy
Frameworks for managing CRA requirements across international operations

### Authorized Representative Services
Support for non-EU manufacturers requiring EU representation

CIPHER

# Key Benefits

1

**CREST-Certified Expertise :** Benefit from CRA guidance delivered by professionals meeting the highest global technical standards.

2

**Regulatory certainty :** Clear interpretation of CRA requirements from experts who actively monitor European regulatory developments.

3

**Efficient compliance approach :** Optimized strategies minimizing compliance burden while ensuring full regulatory adherence

4

**Market access protection :** Proactive compliance ensuring uninterrupted access to European markets for digital products

5

**Integrated with existing processes :** CRA compliance approaches designed to enhance rather than duplicate existing security practices

CIPHER

Act Compliance Services Data sheets

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for regulatory compliance and product security across the entire region.

## Trusted by Governments

Authorized security partner for leading organizations across all major sectors, including manufacturers, technology providers, and product developers.

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA.

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Active EU Regulatory Engagement

Unique position as an active participant in European regulatory discussions, providing insights beyond published requirements with deep understanding of regulatory intent, upcoming changes, and enforcement priorities that help clients achieve sustainable compliance aligned with the true objectives of the Cyber Resilience Act rather than mere checkbox compliance that may not withstand regulatory scrutiny.

CIPHER

Active Directory & Azure Assessment Services

# Active Directory & Azure Assessment Services

Cipher's Active Directory and Azure Assessment Services provide organizations across the Middle East with comprehensive security evaluations of their critical identity infrastructure. As Active Directory and Azure AD environments represent primary targets for advanced threat actors targeting the region, our specialized assessments identify security misconfigurations, privilege escalation paths, and identity-based vulnerabilities before attackers can exploit them.

# What's Included in Cipher's Active Directory & Azure Assessment Services?

**1**

### On-Premises AD Security Assessment

Thorough evaluation of Active Directory domain configurations, identifying security weaknesses, excessive privileges, and potential attack paths.

**2**

### Azure AD / Entra ID Security Review

Comprehensive analysis of cloud identity configurations, conditional access policies, privileged access management, and tenant security settings.

**3**

### Hybrid Identity Security Assessment

Evaluation of the security between on-premises AD and cloud environments, focusing on synchronization settings and potential cross-domain

**4**

### Domain Controller Configuration Review

Technical assessment of domain controller hardening, patch levels, and security controls.

**5**

### Privilege Escalation Path Analysis

Identification of non-obvious attack paths that could allow attackers to gain domain or tenant-level privileges

**6**

### Group Policy Security Review

Assessment of Group Policy Objects for security misconfigurations and dangerous settings

**7**

### Remediation Roadmap

Prioritized guidance for addressing identified vulnerabilities based on risk level and implementation complexity.

# Highlights

### CREST-Certified Methodology

Assessments conducted according to globally recognized standards ensuring comprehensive coverage and reliable results

### Attack Path Visualization

Clear mapping of potential privilege escalation routes to help understand and address complex identity security risks.

### Non-Disruptive Approach

Assessment techniques designed to avoid business disruption while thoroughly evaluating production environments.

### Regional Threat Context

Evaluation criteria informed by attack techniques employed by threat actors specifically targeting Middle Eastern organizations

CIPHER

Active Directory & Azure Assessment Services

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services

## Trusted by Regional Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

## Industry Recognition

Recognized as MDR Middle East leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company in the Middle East and Greece

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Identity Attack Specialists

Team includes experts specializing in Active Directory and Azure security with extensive experience uncovering sophisticated attack paths in complex enterprise environments.

## Incident Response Insights

Assessment methodology enhanced by lessons learned from actual Active Directory compromise incidents throughout the Middle East region

CIPHER

Advanced Threat Hunting Services Data sheets

# Advanced Threat Hunting Services

Proactively identifying hidden threats has become critical as sophisticated adversaries increasingly evade traditional security controls. Organizations across the Middle East struggle with detecting stealthy attackers, identifying advanced persistent threats, and uncovering malicious activity that bypasses automated detection systems. In response to these challenges, **Cipher offers comprehensive** Advanced Threat Hunting services, providing specialized expertise to systematically search for indicators of compromise, uncover adversary tactics, and identify previously undetected threats within your environment.

CIPHER

# What's Included in Cipher's Advanced Threat Hunting Services?

1

### Hypothesis-Driven Hunting

Structured investigations based on threat intelligence, attacker TTPs, and industry-specific threat scenarios relevant to your organization

2

### Environment-Wide Hunt Operations

Comprehensive searches across endpoints, networks, cloud environments, and identity systems for indicators of malicious activity

3

### Advanced Artifact Analysis

In-depth examination of suspicious files, processes, network connections, and system behaviors using specialized forensic techniques

4

### Threat Intelligence Integration

Incorporation of regional and industry-specific intelligence into hunting methodologies and search patterns.

5

### Custom Hunt Playbook Development

Creation of tailored hunting procedures specific to your technology stack, business operations, and threat profile.

6

### CREST-Accredited Methodology

Industry-leading threat hunting approach validated by CREST's rigorous global certification standards

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from threat hunting delivered by professionals meeting the highest global technical standards.

### Multi-dimensional hunting approach

Comprehensive methodology combining IOC-based searches, behavioral analysis, anomaly detection, and attacker TTPs

### Regional threat focus

Hunt operations targeting threat actors and campaigns specifically known to target organizations in the Middle East

### Continuous capability evolution

Regular updates to hunting techniques based on emerging threats, new attacker methodologies, and evolving adversary tactics

CIPHER

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

CIPHER

Architecture Review Services Data sheets

# Architecture Review Services

Evaluating and strengthening security architecture has become essential for organizations seeking to build resilient defenses against sophisticated threats. Enterprises across the Middle East struggle with designing optimal security architectures, validating existing designs, and aligning security controls with business requirements and risk appetite. In response to these challenges, **Cipher offers comprehensive** Architecture Review services, systematically analyzing your security architecture across multiple domains to identify weaknesses, recommend improvements, and enhance overall security posture.

CIPHER

# What's Included in Cipher's Architecture Review Services?

01
### Enterprise Security Architecture Assessment
Comprehensive evaluation of your overall security architecture framework, principles, and alignment with business objectives.

02
### Network Security Design Review
Detailed analysis of network segmentation, perimeter controls, traffic flow, and defense-in-depth implementation

03
### Identity & Access Architecture Analysis
Thorough assessment of authentication systems, authorization models, privilege management, and identity governance

04
### Data Protection Architecture Evaluation
Review of data classification, protection mechanisms, encryption implementation, and information lifecycle controls

05
### Security Technology Stack Assessment
Analysis of security product selection, integration, coverage gaps, and alignment with protection requirements.

06
### CREST-Accredited Methodology
Industry-leading architecture review approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise
Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Reference architecture comparison
Evaluation against industry-standard security architecture frameworks and design patterns.

### Threat-centric analysis
Architecture assessment focused on resilience against specific threats and attack vectors relevant to your organization

### Business-aligned recommendations
Architectural improvement suggestions balanced with operational requirements, budget constraints, and implementation feasibility

# What Makes Cipher Unique?

CIPHER

Auto GRC Platform Services Data sheets

# Auto GRC Platform

Managing governance, risk, and compliance has become increasingly complex as organizations across the Middle East face expanding regulatory requirements, evolving cybersecurity threats, and fragmented compliance processes. Enterprises struggle with siloed GRC activities, resource-intensive manual assessments, and difficulty maintaining comprehensive risk visibility. In response to these challenges, Cipher offers the Auto GRC Platform, providing an AI-powered solution that delivers 360-degree governance visibility, automates compliance workflows, and provides virtual CISO capabilities to enhance your security posture.

CIPHER

# What's Included in Cipher's Auto GRC Platform?

**1 AI-Powered Risk Assessment**

Intelligent analysis of your security posture with automated identification of control gaps, vulnerabilities, and compliance issues

**2 Unified Compliance Framework**

Centralized management of multiple regulatory requirements with automated mapping between overlapping controls and standards

**3 Continuous Control Monitoring**

Real-time visibility into control effectiveness with automated evidence collection and validation across your environment

**4 Virtual CISO Capabilities**

AI-driven security program guidance providing executive-level insights, prioritization recommendations, and strategic roadmap development

**5 Dynamic Risk Visualization**

Comprehensive dashboards offering 360-degree visibility into organizational risk posture, compliance status, and security program maturity

**6 CREST-Accredited Methodology**

Industry-leading GRC approach validated by CREST's rigorous global certification standards

# Key Features

**Multi-Framework Compliance Engine**

Automated assessment and reporting for ISO 27001, NIST CSF, PCI DSS, NCA ECC, SAMA, and regional regulatory frameworks

**AI-Driven Control Validation**

Machine learning algorithms that continuously verify control implementation, identify inconsistencies, and validate evidence

**Natural Language Policy Generation**

Automated creation of security policies and procedures aligned with your specific regulatory requirements and organizational context.

**Risk Quantification & Modelling**

Advanced algorithms translating technical vulnerabilities into business impact metrics and financial risk exposure

**Third-Party Risk Management**

Comprehensive vendor assessment workflows with automated questionnaires, evidence collection, and risk scoring

# HIGHLIGHTS

**CREST-Certified Expertise**

Benefit from GRC technology built by professionals meeting the highest global technical standards.

**AI-augmented compliance**

Machine learning capabilities that reduce assessment time by up to 70% while improving accuracy and thoroughness.

**Regional compliance intelligence**

Built-in knowledge of Middle Eastern regulatory frameworks, including Saudi NCA, UAE IA, Qatar NISIA, and other regional requirements.

**Cross-functional collaboration**

Unified platform connecting security, IT, risk, legal, and business stakeholders in streamlined GRC processes

# What Makes Cipher Unique?

Camera Services Data sheets

# Camera Cybersecurity Services

Securing networked camera systems has become critical as organizations across the Middle East deploy extensive video surveillance for security, operations, and analytics purposes. Enterprises face significant challenges with protecting camera networks, preventing unauthorized access to video feeds, and ensuring the integrity of surveillance infrastructure against increasingly sophisticated threats. In response to these challenges, **Cipher offers comprehensive** Camera Cybersecurity services, providing specialized expertise to identify vulnerabilities, implement protections, and maintain security across your entire camera ecosystem.

CIPHER

Camera Services Data sheets

# What's Included in Cipher's Camera Cybersecurity Services?

1

### Camera System Security Assessment

Comprehensive evaluation of camera hardware, firmware, network infrastructure, and management platforms for security vulnerabilities.

2

### Video Management System (VMS) Hardening

Implementation of security best practices for VMS platforms, including access controls, encryption, and secure configuration.

3

### Camera Network Segmentation

Design of secure network architectures isolating camera systems from critical business networks while maintaining operational functionality.

4

### Secure Remote Access Implementation

Development of protected mechanisms for authorized remote monitoring and management of camera systems

5

### Firmware Security & Update Management

Establishment of secure processes for validating and deploying camera firmware updates across distributed environments

6

### CREST-Accredited Methodology

Industry-leading camera security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from camera security delivered by professionals meeting the highest global technical standards

### Comprehensive ecosystem protection

Security controls spanning cameras, recording systems, analytics platforms, and integration points with other security systems.

### Privacy compliance

Implementation approaches ensuring camera deployments meet relevant data protection regulations and privacy requirements

### Advanced threat detection

Monitoring capabilities to identify unauthorized access attempts, tampering, and compromises of camera systems

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

CIPHER

CII Protection Framework Services Data sheets

# Critical Information Infrastructure Protection Framework Services

## Executive Overview

Securing critical information infrastructure has become imperative as nations across Europe, the Middle East, and Africa face escalating threats to essential services, digital dependencies, and vital national systems. Governments and regulatory authorities struggle with establishing comprehensive CII protection frameworks, implementing effective governance models, and ensuring resilience of critical sectors. In response to these challenges, Cipher offers comprehensive Critical Information Infrastructure Protection Framework Services, providing specialized expertise to develop, implement, and enhance national CII protection strategies, regulatory frameworks, and sector-specific security standards across the EMEA region.

CIPHER

# What's Included in Cipher's CII Protection Framework Services?

1

### CII Framework Development

Creation of comprehensive national frameworks for identifying, protecting, and regulating critical information infrastructure

2

### Critical Sector Definition

Development of methodologies for determining critical sectors, services, and systems within national contexts

3

### Regulatory Framework Design

Creation of legislative and regulatory structures governing CII protection, incident reporting, and compliance

4

### Governance Model Implementation

Establishment of national coordination mechanisms, institutional responsibilities, and oversight structures

5

### Sector-Specific Standards

Development of tailored security requirements and controls for diverse critical sectors and infrastructure types

6

### CREST-Accredited Methodology

Industry-leading approach validated by CREST's rigorous global certification standards

CIPHER

# Framework Development Approach

## 1 CRITICAL INFRASTRUCTURE SCOPING

### National Asset Identification

Methodologies for identifying critical information systems and digital infrastructure

### Criticality Assessment

Frameworks for evaluating and classifying infrastructure based on national importance

### Dependency Mapping

Approaches for understanding interconnections between critical systems and services

### Cross-Sector Analysis

Methods for identifying shared vulnerabilities and cascading failure scenarios

### International Alignment

Harmonization with regional and global critical infrastructure definitions

## 2 PROTECTION FRAMEWORK DESIGN

### Legislative Foundation

Development of legal frameworks establishing CII protection authorities and requirements

### Regulatory Structure

Creation of compliance mechanisms, enforcement approaches, and regulatory oversight

### Governance Architecture

Design of national coordination bodies, reporting structures, and stakeholder roles

### Public-Private Partnership Models

Frameworks for collaborative protection involving government and private sector

### Risk Management Approaches

Methodologies for assessing and managing risks to critical infrastructure

## 3 SECTOR-SPECIFIC STANDARDS DEVELOPMENT

### Baseline Security Requirements

Definition of minimum security controls applicable across all critical sectors

### Sector-Specific Controls

Development of tailored security measures addressing unique sectoral requirements

### Maturity Model Creation

Design of capability maturity frameworks for measuring and improving sector protection

### Compliance Assessment Methodologies

Approaches for evaluating adherence to CII protection requirements

### International Standards Alignment

Harmonization with ISO, IEC, NIST, and other relevant global standards

## 4 IMPLEMENTATION SUPPORT

### Implementation Guidance

Development of detailed implementation guides for critical infrastructure operators

### Capability Building Programs

Creation of training and awareness initiatives for CII protection stakeholders

### Assessment Frameworks

Design of audit and evaluation approaches for measuring implementation effectiveness

### Continuous Improvement Mechanisms

Methods for evolving frameworks based on emerging threats and lessons

### Cross-Border Coordination

Approaches for international cooperation on transnational critical infrastructure

CIPHER

# Sector-Specific Frameworks

OUR CII FRAMEWORK SERVICES ADDRESS THE UNIQUE REQUIREMENTS OF DIVERSE CRITICAL SECTORS:

1 **Energy Infrastructure :** Frameworks for power generation, transmission, distribution, and energy management systems

2 **Telecommunications :** Protection approaches for communication networks, internet infrastructure, and broadcast systems

3 **Financial Services :** Standards for banking systems, payment infrastructure, and financial market operations

4 **Transportation :** Frameworks for aviation, maritime, rail, and intelligent transportation systems

5 **Healthcare & Public Health :** Protection standards for healthcare delivery, public health monitoring, and medical systems

6 **Government Services :** Approaches for protecting essential government systems, services, and digital infrastructure

7 **Water & Wastewater :** Frameworks for water supply, treatment, and distribution system protection

8 **Industrial Control Systems :** Cross-sector standards for SCADA, ICS, and operational technology protection

CII Protection Framework Services Data sheets

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for critical infrastructure protection across the entire region.

## Trusted by Governments

Authorized security partner for multiple national cybersecurity authorities, CERTs, and regulatory bodies across EMEA.

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices

## Comprehensive CII Protection Experience

Unparalleled expertise in developing national critical infrastructure frameworks across diverse EMEA contexts, combining global best practices with deep understanding of regional infrastructure landscapes, regulatory environments, and security challenges to create frameworks that are both internationally aligned and locally implementable, addressing the unique infrastructure profiles, resource constraints, and operational realities of different nations throughout Europe, the Middle East, and Africa

Cloud Security Assessment Services Data sheets

# Cloud Security Assessment Services

Evaluating security posture across complex cloud environments has become critical as organizations throughout the Middle East accelerate digital transformation initiatives. Many struggles with understanding cloud-specific risks, identifying misconfigurations, and ensuring compliance across multiple cloud platforms and services. In response to these challenges, **Cipher offers comprehensive** Cloud Security Assessment services, systematically evaluating your cloud environments against best practices, compliance requirements, and threat scenarios to identify vulnerabilities and strengthen your cloud security posture.

CIPHER

# What's Included in Cipher's Cloud Security Assessment Services?

1

### Use-Case Design & Documentation

Development of detailed detection use cases with clear logic, data sources, thresholds, and expected outcomes

2

### Threat Modeling & Coverage Analysis

Thorough assessment of relevant threats and attack techniques requiring detection in your environment

3

### Technology-Specific Implementation

Translation of use cases into platform-specific configurations for your SIEM, EDR, NDR, and other security tools

4

### MITRE ATT&CK Mapping

Alignment of detection use cases with MITRE ATT&CK framework to ensure comprehensive coverage of adversary tactics and techniques

5

### CREST-Accredited Methodology

Industry-leading use-case development approach validated by CREST's rigorous global certification standards

6

### Tuning & Optimization Guidance

Detailed procedures for refining use cases to minimize false positives while maintaining detection effectiveness

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Platform-specific expertise

Specialized assessment methodologies for major cloud providers including Microsoft Azure, AWS, Google Cloud, and regional providers

### Compliance alignment

Evaluation against relevant frameworks including NCA ECC, SAMA, ISO 27017/27018, and cloud-specific compliance requirements

### Risk-based findings

Vulnerabilities prioritized based on exploitability, business impact, and relevance to your specific cloud implementation

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

## Trusted by Regional Giants

CMM Services Data sheets

# Cybersecurity Capacity Maturity Model for Nations (CMM) Services

## Executive Overview

Developing national cybersecurity capabilities has become critical as countries across Europe, the Middle East, and Africa face increasing digital threats, complex international dependencies, and the need for comprehensive cyber resilience frameworks. Nations struggle with assessing their cybersecurity maturity, identifying priority improvement areas, and developing strategic roadmaps for enhancing national cyber capabilities. In response to these challenges, Cipher offers comprehensive Cybersecurity Capacity Maturity Model for Nations (CMM) services, providing specialized expertise to assess, benchmark, and strengthen national cybersecurity frameworks using the internationally recognized Oxford CMM methodology.

# What's Included in Cipher's National CMM Services?

01

### Comprehensive CMM Assessments

Thorough evaluation of national cybersecurity capacities across all five dimensions of the Oxford CMM framework

02

### Multi-Stakeholder Engagement

Facilitation of collaborative assessment processes involving government, private sector, academia, and civil society representatives

03

### Maturity Benchmarking

Comparative analysis of national capabilities against regional peers, international standards, and leading practices

04

### Strategic Capability Roadmaps

Development of prioritized improvement strategies addressing identified gaps and maturity enhancement opportunities

05

### Implementation Advisory

Expert guidance on operationalizing CMM findings and executing national cybersecurity enhancement initiatives

06

### CREST-Accredited Methodology

Industry-leading approach validated by CREST's rigorous global certification standards and aligned with Oxford CMM requirements

CIPHER

# CMM Assessment Dimensions

## 1 CYBERSECURITY POLICY AND STRATEGY

**National Cybersecurity Strategy**
Assessment of strategy development, implementation, and effectiveness

**Incident Response Capabilities**
Evaluation of national CERT/CSIRT structures and operational capabilities

**Critical Infrastructure Protection**
Analysis of frameworks protecting essential national services and systems

**Crisis Management**
Assessment of cyber crisis readiness and national response mechanisms

**Cyber Defense Capabilities**
Evaluation of defensive capacities and coordination mechanisms

## 2 CYBER CULTURE AND SOCIETY

**Cybersecurity Mindset**
Assessment of security awareness across government, businesses, and society

**Trust and Confidence Online**
Evaluation of public trust in digital services and e-government initiatives

**User Understanding of Risks**
Analysis of cyber risk awareness among different stakeholder groups

**Reporting Mechanisms**
Assessment of incident reporting frameworks and information sharing capabilities

**Media and Social Media**
Evaluation of cybersecurity communication and public information channels

## 3 CYBERSECURITY EDUCATION, TRAINING AND SKILLS

**Cybersecurity Education**
Assessment of formal educational programs at all levels

**Workforce Development**
Evaluation of professional training initiatives and certification frameworks

**Professional Training**
Analysis of specialized cybersecurity training capabilities and programs

**Executive Awareness**
Assessment of leadership understanding and prioritization of cybersecurity

**National Skills Framework**
Evaluation of competency models and skills development strategies

CIPHER

CMM Services Data sheets

## 4 LEGAL AND REGULATORY FRAMEWORKS

**Cybersecurity Legal Frameworks**

Assessment of legislative foundations for cybersecurity

**Criminal Justice Capabilities**

Evaluation of investigation and prosecution capacities for cybercrimes

**Formal and Informal Cooperation**

Analysis of international and public-private collaboration mechanisms

**Data Protection Frameworks**

Assessment of privacy regulations and implementation effectiveness

**Regulatory Compliance**

Evaluation of enforcement mechanisms and regulatory oversight capabilities

## 5 STANDARDS, ORGANIZATIONS, AND TECHNOLOGIES

**Adherence to Standards**

Assessment of implementation of international cybersecurity standards

**Internet Infrastructure Resilience**

Evaluation of critical internet infrastructure security and resilience

**Software Quality**

Analysis of secure development practices and software security assurance

**Technical Security Controls**

Assessment of technology deployment and security control implementation

**Cryptographic Controls**

Evaluation of cryptography usage, management, and regulatory frameworks

# Delivery Approach

OUR CMM ASSESSMENT METHODOLOGY FOLLOWS A STRUCTURED, COLLABORATIVE APPROACH:

1. **Preparation & Scoping:** Initial engagement with national authorities to define assessment scope and identify key stakeholders
2. **Stakeholder Identification:** Mapping of relevant participants across government, private sector, academia, and civil society
3. **Multi-Stakeholder Workshops:** Facilitated sessions gathering evidence and perspectives across all CMM dimensions
4. **Evidence Collection & Analysis:** Comprehensive data gathering through interviews, documentation review, and technical assessment
5. **Maturity Determination:** Systematic evaluation of capabilities across each dimension and factor using the CMM maturity scale
6. **Recommendations Development:** Creation of prioritized, actionable recommendations for capability enhancement
7. **Roadmap Creation:** Development of strategic implementation plans for addressing identified capability gaps
8. **Validation & Finalization :** Collaborative review of findings and recommendations with key national stakeholders

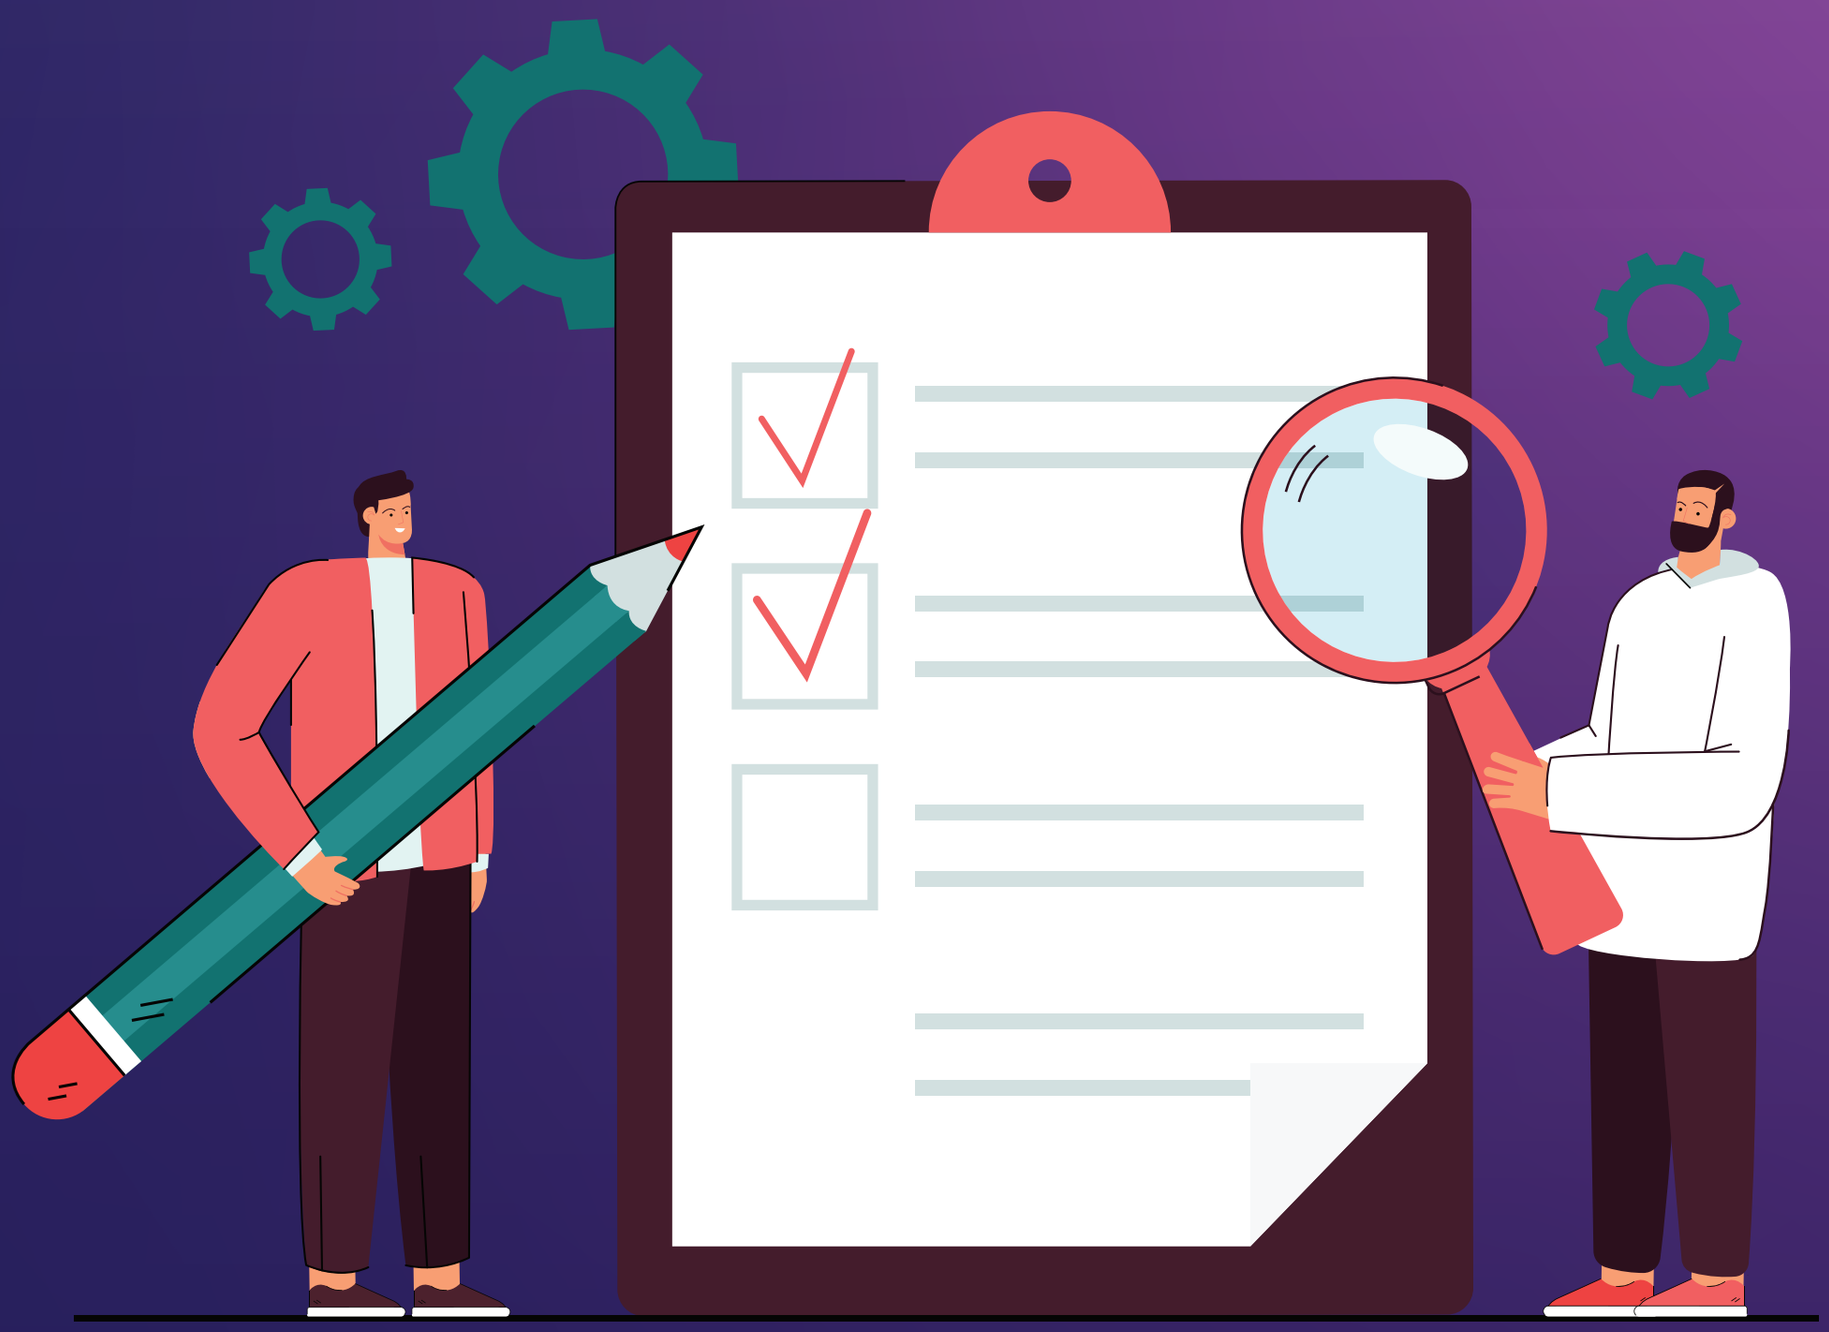
Compromise Assessment Service



# Compromise Assessment Service

Cipher's Compromise Assessment Service provides organizations across the Middle East with comprehensive threat hunting capabilities to identify existing security breaches, malicious activity, and signs of compromise that may have evaded existing security controls. As sophisticated threat actors increasingly target regional organizations, this proactive approach to security validation has become essential for ensuring business continuity and protecting critical assets.

# What's Included in Cipher's Compromise Assessment Service?

1

### Sophisticated Threat Hunting

Advanced techniques to uncover indicators of compromise, malicious persistence mechanisms, and attacker techniques across your environment

2

### Deep Forensic Analysis

Detailed examination of systems, network traffic, logs, and artifacts to identify suspicious activities and potential breaches

3

### Attacker Dwell Time Assessment

Determination of breach duration and scope to understand the potential impact on business operations

4

### Lateral Movement Mapping

Analysis of how attackers may have moved through your environment to access critical assets

5

### Custom IOC Development

Creation of organization-specific indicators based on discovered threat activity

6

### Remediation Recommendations

Actionable guidance for containing and eradicating threats, addressing security gaps, and improving security posture

## Highlights

### CREST-Certified Expertise

Assessments conducted by professionals meeting the highest global technical standards.

### Middle East threat intelligence

Specialized knowledge of APT groups and criminal organizations targeting regional sectors.

### Non-disruptive methodology

Minimal operational impact through strategic data collection and analysis techniques.

### Rapid deployment

Quick mobilization of expert resources during suspected compromise scenarios.

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services

## Trusted by Regional Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

## Industry Recognition

Recognized as MDR Middle East leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company in the Middle East and Greece

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Threat Hunting Expertise

Specialized team with extensive experience uncovering sophisticated threats targeting organizations throughout the Middle East region

CIPHER

Configuration Review Services Data sheets

# Configuration Review Services

Ensuring secure system configurations has become critical for organizations seeking to reduce their attack surface and strengthen baseline security controls. Enterprises across the Middle East struggle with maintaining secure configurations across diverse technology environments, identifying misconfigurations, and ensuring alignment with industry standards and best practices. In response to these challenges, **Cipher offers comprehensive** Configuration Review services, systematically evaluating system settings, security parameters, and technical controls across your infrastructure to identify weaknesses and enhance your security posture.

CIPHER

Configuration Review Services Data sheets

# What's Included in Cipher's Configuration Review Services?

01

### Enterprise Security Architecture Assessment

Detailed evaluation of security settings, hardening measures, and patch levels across server and endpoint operating systems.

02

### Database Security Configuration Evaluation

Comprehensive assessment of database security parameters, access controls, authentication mechanisms, and encryption settings.

03

### Network Device Configuration Review

Thorough analysis of router, switch, firewall, and load balancer configurations for security best practices and policy enforcement

04

### Cloud Service Configuration Analysis

In-depth review of cloud platform configurations, security controls, and service-specific security settings

05

### CREST-Accredited Methodology

Industry-leading configuration review approach validated by CREST's rigorous global certification standards

06

### Application Security Parameter Review

Examination of web servers, application servers, and critical application components for secure configuration

# HIGHLIGHTS

### Benchmark-based assessment

Evaluation against CIS Benchmarks, vendor security guidelines, and industry-specific hardening standards

### Automated and manual verification

Combination of specialized tools and expert analysis to ensure comprehensive configuration coverage

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Prioritized remediation guidance

Clear recommendations for addressing configuration weaknesses based on security impact and implementation complexity

# What Makes Cipher Unique?

CIPHER

CSIRT Services Data sheets

# CSIRT Consultancy Services

## Executive Overview

Establishing effective incident response capabilities has become critical as organizations across Europe, the Middle East, and Africa face increasing cyber-attacks, regulatory requirements for breach management, and complex incident handling challenges. Enterprises struggle with developing mature incident response programs, building internal CSIRT capabilities, and establishing effective processes for managing security incidents. In response to these challenges, Cipher offers comprehensive CSIRT Consultancy Services, providing specialized expertise to design, implement, and enhance Computer Security Incident Response Teams and incident management capabilities across the EMEA region.

CIPHER

# What's Included in Cipher's CSIRT Consultancy Services?

1

### CSIRT Program Assessment

Comprehensive evaluation of existing incident response capabilities with detailed maturity scoring and improvement roadmaps

2

### CSIRT Establishment & Design

End-to-end development of new incident response functions with team structures, processes, and operational models.

3

### Incident Response Process Development

Creation of tailored incident handling procedures, workflows, and response methodologies.

4

### CSIRT Technology Implementation

Selection and deployment of specialized tools supporting incident detection, investigation, and remediation

5

### Incident Simulation & Exercises

Design and facilitation of realistic incident scenarios and tabletop exercises for response team training

6

### CREST-Accredited Methodology

Industry-leading CSIRT approach validated by CREST's rigorous global certification standards.

## KEY SERVICE COMPONENTS

CSIRT PROGRAM DEVELOPMENT

### AI-Enhanced Awareness

Smart phishing patterns, skill-based training delivery, and dynamic campaign randomization for long-term learning impact.

### Offline & Static Training Options

Awareness content via posters, screensavers, and intranet integration for wider reach

### Flexible Integration

Import/export e-learning modules, SCORM compatibility, and customizable training libraries.

### AI-Enhanced Awareness

Smart phishing patterns, skill-based training delivery, and dynamic campaign randomization for long-term learning impact.

### Offline & Static Training Options

Awareness content via posters, screensavers, and intranet integration for wider reach

CIPHER

# CSIRT Process Enhancement

### Incident Classification Framework

Creation of standardized incident categorization and severity rating methodologies

### Incident Handling Procedures

Development of detailed processes for detection, triage, containment, eradication, and recovery

### Cross-Functional Coordination

Design of effective collaboration models between CSIRT and other organizational functions

### Communication Protocols

Implementation of stakeholder notification procedures, reporting templates, and escalation paths

### Post-Incident Activities

Establishment of root cause analysis, lessons learned, and continuous improvement processes

# CSIRT Capability Building

1

### CSIRT Training Programs

Design and delivery of specialized training for incident response personnel

2

### Technical Playbook Development

Creation of detailed technical response procedures for various incident types

3

### Tabletop Exercise Design

Development of realistic incident scenarios for team training and process validation

4

### CSIRT Technology Selection

Advisory on specialized tools for incident detection, investigation, and management

5

### Metrics & Reporting

Implementation of performance metrics, KPIs, and executive reporting frameworks

# Specialized CSIRT Focus Areas

1

### Regional Regulatory Compliance

CSIRT designs addressing specific EMEA regulatory requirements including NIS2, GDPR, and regional breach notification laws

2

### Industry-Specific CSIRT Models

Tailored incident response capabilities for financial services, healthcare, energy, public sector, and other specialized industries

3

### Multi-National CSIRT Coordination

Design of distributed CSIRT models for organizations operating across multiple EMEA jurisdictions

4

### CSIRT-SOC Integration

Optimization of operational relationships between security operations and incident response functions

5

### Threat Intelligence Integration

Enhancement of incident response with relevant threat intelligence capabilities

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services across the entire region.

## Trusted by EMEA Giants

Authorized security partner for leading organizations across all major sectors, including finance, energy, healthcare, manufacturing, and government.

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices

## Real-World CSIRT Experience

Unique advisory approach based on Cipher's extensive operational experience managing our own CSIRT and responding to thousands of security incidents across EMEA, providing practical, battle-tested guidance informed by actual incident response operations rather than theoretical frameworks alone, with deep understanding of regional threat landscapes, regulatory requirements, and operational challenges specific to European, Middle Eastern, and African environments.

CIPHER

Cyber Range Services Data sheets

# Cyber Range Services

Developing realistic security training environments has become critical as organizations across the Middle East seek to build practical cybersecurity skills through immersive, hands-on experiences. Enterprises struggle with creating environments that accurately reflect their infrastructure, simulate sophisticated threats, and provide meaningful learning opportunities. In response to these challenges, **Cipher offers comprehensive** Cyber Range Services, providing specialized expertise to design, build, and operate advanced simulation environments for security training, incident response exercises, and capability validation.

CIPHER

# What's Included in Cipher's Cyber Range Services?

**1**

### Custom Range Design & Development

Creation of tailored cyber ranges reflecting your specific technology stack, security tools, and operational environment

**2**

### Attack Scenario Development

Design of realistic attack simulations based on relevant threat actors, TTPs, and campaigns targeting your industry and region

**3**

### Red Team Exercises

Adversary emulation services where expert offensive security professionals simulate sophisticated attackers within the range environment.

**4**

### Blue Team Training

Defensive capability development using the range for SOC analyst training, incident response drills, and security tool proficiency

**5**

### Range Hosting & Management

Fully-managed cyber range platforms available on-premises, cloud-hosted, or hybrid with ongoing scenario updates and environment maintenance.

**6**

### CREST-Accredited Methodology

Industry-leading cyber range approach validated by CREST's rigorous global certification standards.

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from cyber range services delivered by professionals meeting the highest global technical standards.

### Digital twin environments

Realistic replications of your production networks, applications, and security controls for high-fidelity training

### Targeted scenario library

Extensive collection of industry-specific attack scenarios, including those relevant to critical infrastructure, finance, government, and energy sectors

### Objective skill validation

Comprehensive scoring and assessment mechanisms to measure individual and team performance during range exercises

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

## Trusted by Regional Giants

CIPHER

Cybersecurity Audit Services Services Data sheets

# Cybersecurity Audit Services

Achieving security assurance has become critical as organizations across Europe, the Middle East, and Africa face increasing regulatory scrutiny, complex compliance requirements, and demands for demonstrable security controls. Enterprises struggle with navigating diverse audit frameworks, addressing cross-regional compliance mandates, and validating security control effectiveness. In response to these challenges, Cipher offers comprehensive Cybersecurity Audit Services, providing specialized expertise to conduct thorough, independent assessments of your security posture, verify compliance with relevant standards, and deliver actionable insights for security improvement across the EMEA region.

CIPHER

Cybersecurity Audit Services Services Data sheets

# What's Included in Cipher's Cybersecurity Audit Services?

### Comprehensive Security Control Assessments

Thorough evaluation of technical, administrative, and physical security controls against recognized standards and frameworks

1

### Regulatory Compliance Audits

Specialized assessments verifying adherence to region-specific regulations including GDPR, NIS2, DORA, UAE IA, Saudi NCA, and POPIA

2

### Industry Framework Certifications

Independent audit services for ISO 27001, PCI DSS, SOC 2, NIST CSF, and other industry standards across EMEA jurisdictions

3

### Technical Security Verification

In-depth testing of security control implementation and effectiveness through configuration reviews, technical validation, and control testing

4

### Third-Party Risk Audits

Comprehensive evaluation of vendor security programs, supplier compliance, and third-party security control implementation

5

### CREST-Accredited Methodology

Industry-leading audit approach validated by CREST's rigorous global certification standards

6

# Audit Service Portfolio

### Pre-Certification Readiness Assessments

Gap analysis and preparation services before formal certification audits to maximize success likelihood

### Official Certification Audits

Accredited audit services for formal certification against recognized standards where Cipher holds official audit authority.

### Continuous Compliance Monitoring

Ongoing assessment programs providing regular validation of control effectiveness and compliance maintenance

### Custom Security Framework Evaluations

Specialized audits against organization-specific security requirements, industry frameworks, or custom control sets

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from audit services delivered by professionals meeting the highest global technical standards

### Authorized assessment capability

Formal accreditation and certification authority for major security frameworks across the EMEA region

### Cross-regional compliance knowledge

Specialized expertise in diverse regulatory requirements throughout Europe, Middle East, and Africa

### Actionable remediation guidance

Practical, prioritized recommendations addressing identified gaps with implementation roadmaps

CIPHER

Cipheria LMS Services Data sheets

# Cybersecurity Awareness (Cipheria LMS)

## Introduction

Human error remains one of the most exploited vulnerabilities in cybersecurity incidents. Organizations across the Middle East struggle to deliver engaging, effective, and measurable cybersecurity awareness programs that adapt to evolving threats. Cipheria LMS bridges this gap with an advanced awareness and training platform. Combining phishing & smishing simulations with a full-featured Learning Management System (LMS), Cipheria enables organizations to strengthen their human firewall, reduce risk exposure, and instill a culture of cyber vigilance.

CIPHER

# What's Included in Cipheria LMS?

1

## Phishing & Smishing Simulations

Realistic email and SMS-based attack exercises that expose employees to real-world tactics safely.

2

## Learning Management System (SAT)

Complete library of cybersecurity awareness modules, personalized training paths, and gamified learning.

3

## Multilingual Phishing & Training Content

Predefined templates and exercises available in multiple languages, tailored to regional needs

4

## Video & Training Customization

Adapt training videos with your brand, languages, and scenarios for maximum relevance

5

## E-Learning Authoring Toolkit

Create custom training content with drag-and-drop authoring and SCORM support.

6

## Comprehensive Exercise Types

Including data entry, hyperlink, double-barrel, Java-based, spear phishing, URL shortening, and more.

7

## Certification & Reporting

Automatically generate training diplomas, user performance analytics, and department-level benchmarking.

# HIGHLIGHTS

## AI-Enhanced Awareness

Smart phishing patterns, skill-based training delivery, and dynamic campaign randomization for long-term learning impact.

## Offline & Static Training Options

Awareness content via posters, screensavers, and intranet integration for wider reach

## Flexible Integration

Import/export e-learning modules, SCORM compatibility, and customizable training libraries.

CIPHER

# What Makes Cipher Unique?

## Middle East's Cybersecurity Leader

First CREST-accredited provider in the region for SOC, Penetration Testing, VA, and Incident Response.

## Trusted by Industry Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with proven expertise in critical infrastructure protection.

## Globally Recognized Excellence

Named MDR leader in the Middle East by IDC, and awarded for innovation as one of the fastest-growing cybersecurity companies in the Middle East and Greece

## Intelligence-Driven Training

Member of FIRST, providing access to global threat intelligence to ensure training reflects the latest attack vectors.

## Proven Awareness & Training Expertise

Years of experience designing and delivering enterprise-scale cybersecurity awareness programs across the Middle East.

CIPHER

DPO Services Data sheets

# Data Privacy Operations (DPO) Build-Operate-Transfer Services

## Executive Overview

Establishing effective data privacy operations has become critical as organizations across Europe, the Middle East, and Africa face complex privacy regulations, increasing data protection requirements, and growing privacy expectations from stakeholders. Enterprises struggle with operationalizing privacy compliance, building internal privacy capabilities, and implementing sustainable privacy programs. In response to these challenges, Cipher offers comprehensive Data Privacy Operations Build-Operate-Transfer (BOT) Services, providing specialized expertise to design, implement, operate, and ultimately transfer robust privacy operations to your organization across the EMEA region.

# What's Included in Cipher's DPO Build-Operate-Transfer Services?

1

## Privacy Program Design

Comprehensive development of tailored privacy governance structures, operating models, and implementation frameworks

2

## Privacy Operations Implementation

Hands-on establishment of privacy processes, controls, and technical measures based on program design

3

## Operational Management

Ongoing operation of privacy functions including request handling, consent management, and compliance activities

4

## Capability Transfer

Structured knowledge transfer, training, and transition support to migrate operations to your internal teams

5

## Post-Transfer Support

Continued advisory and assistance during the transition period ensuring operational continuity.

6

## CREST-Accredited Methodology

Industry-leading privacy approach validated by CREST's rigorous global certification standards

CIPHER

# Our Build-Operate-Transfer Approach

## 1 BUILD – PRIVACY PROGRAM DESIGN & IMPLEMENTATION

### Privacy Framework Development

Creation of comprehensive privacy governance and operating models

### Process & Procedure Design

Development of detailed privacy processes, workflows, and standard procedures

### Technology Implementation

Selection and deployment of privacy management technologies and tools

### Documentation Framework

Creation of privacy policies, notices, procedures, and compliance records

### Role & Responsibility Definition

Design of privacy organization structure and clear accountability assignments

### Metrics & Reporting

Establishment of privacy performance indicators and management reporting

## 2 PRIVACY REQUEST MANAGEMENT

### Privacy Request Management

Processing of data subject requests including access, deletion, and portability

### Consent & Preference Management

Administration of consent collection, storage, and preference centers

### Data Protection Impact Assessments

Conducting DPIAs for high-risk processing activities

### Incident & Breach Response

Management of privacy incidents and data breach notification processes

### Vendor Privacy Oversight

Administration of third-party privacy assessments and ongoing monitoring

### Regulatory Engagement

Handling of regulatory inquiries, notifications, and authority interactions

### Compliance Monitoring

Ongoing assessment of privacy practices against regulatory requirements

### Privacy Training Delivery

Execution of role-based privacy awareness and training programs

## 3 TRANSFER – CAPABILITY TRANSITION

### Knowledge Transfer Program

Structured approach for transferring operational knowledge to internal teams

### Staff Training & Shadowing

Comprehensive training programs with hands-on operational experience

### Transition Planning

Development of detailed transition roadmaps with clear milestones and checkpoints

### Gradual Responsibility Transfer

Phased handover of operational responsibilities with supervision

### Operational Documentation

Creation of detailed operational playbooks, guides, and reference materials

### Performance Evaluation

Assessment of internal team readiness and operational capability verification

### Hybrid Operations Period

Collaborative operational phase with decreasing external involvement

### Post-Transfer Support

Ongoing advisory and assistance during initial internal operations period

# Regional Privacy Expertise

## OUR SERVICES ADDRESS DIVERSE PRIVACY REGULATIONS ACROSS EMEA REGIONS:

### European Union

Comprehensive GDPR implementation and operational compliance

### United Kingdom

UK GDPR and Data Protection Act 2018 requirements

### Middle East

PDPL (Saudi Arabia), PDPL (UAE), DPL (DIFC), and other emerging frameworks

### Africa

POPIA (South Africa), NDPR (Nigeria), and pan-African privacy considerations

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for regulatory compliance and product security across the entire region.

## Trusted by Governments

Authorized security partner for leading organizations across all major sectors, including manufacturers, technology providers, and product developers.

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA.

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Practical Privacy Operations Experience

Unmatched hands-on experience operating complex privacy programs across diverse EMEA jurisdictions, providing not just theoretical guidance but practical, battle-tested approaches based on actual privacy operations management, with deep understanding of operational challenges, efficiency opportunities, and regional variations in privacy implementation that ensure your privacy operations are both compliant and sustainable across your entire EMEA footprint

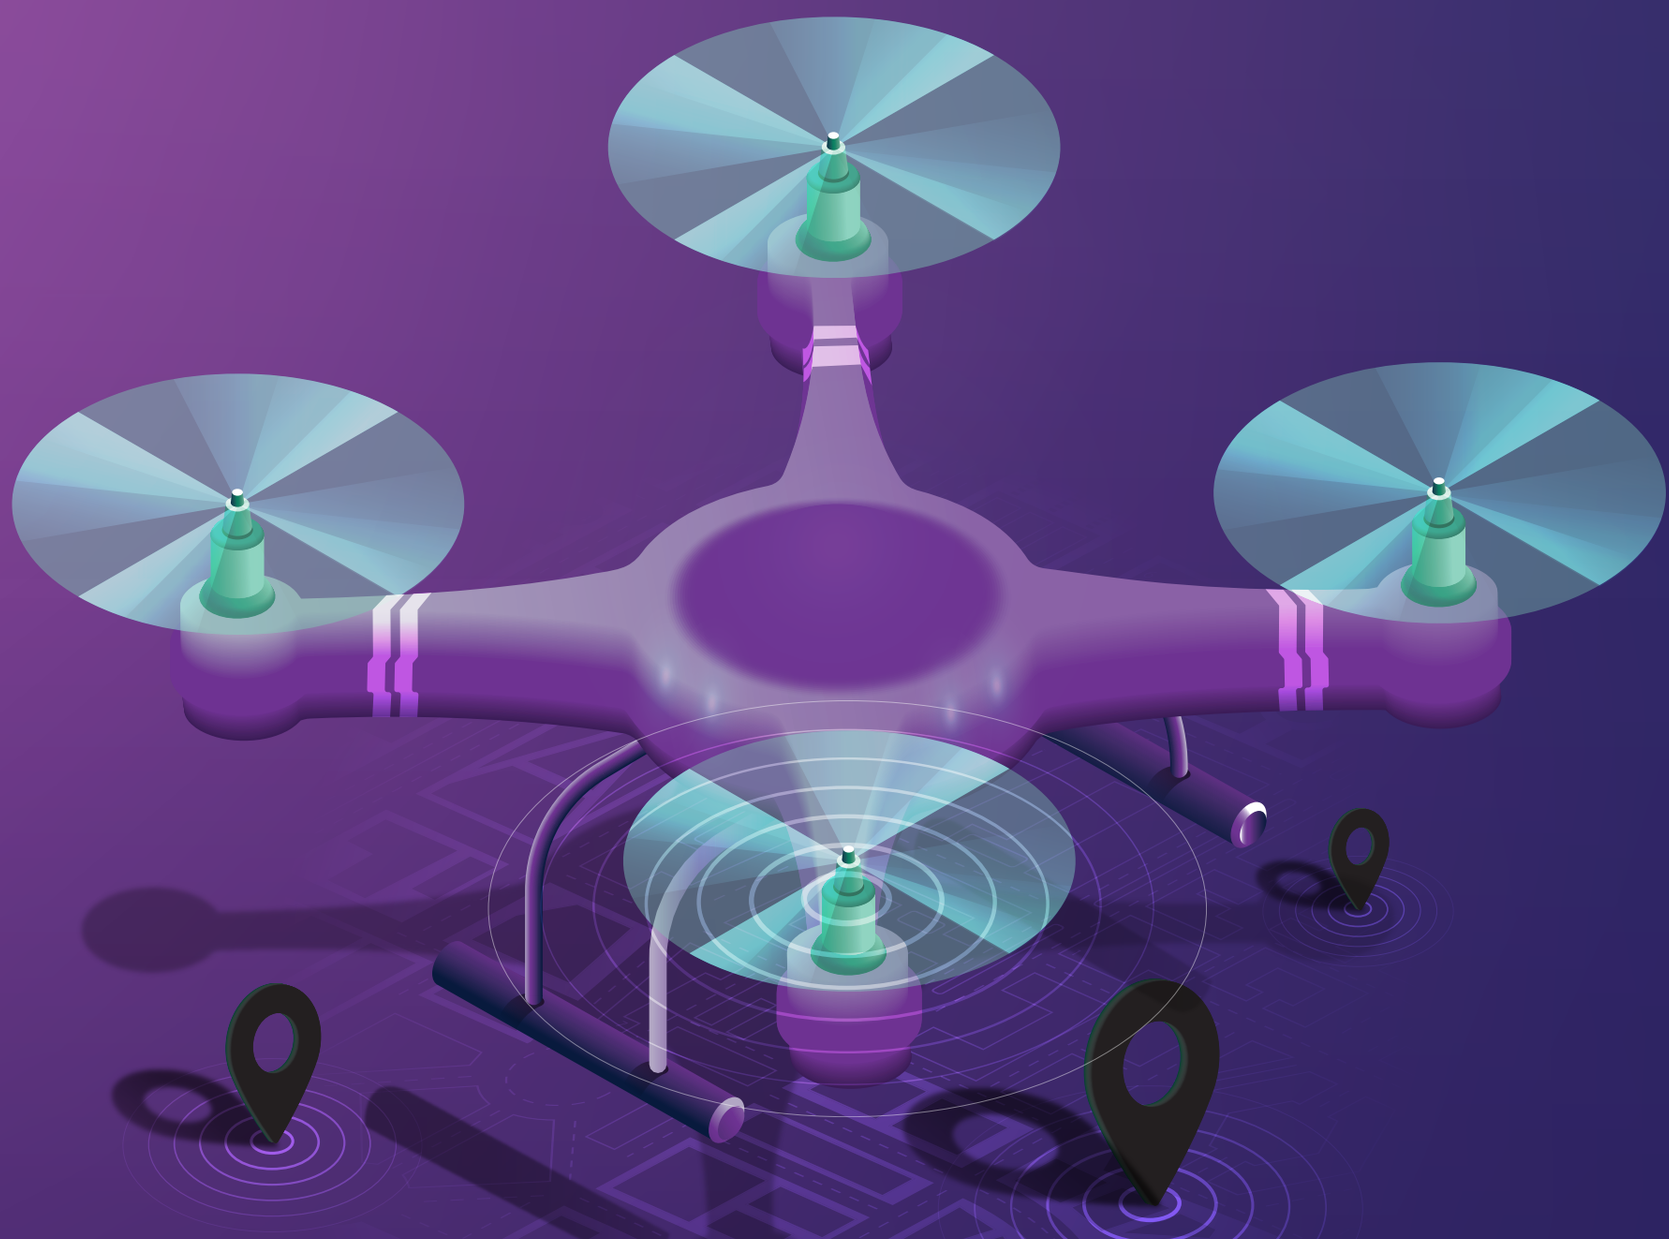
Drone Services Data sheets



# Drone Cybersecurity Services

Securing unmanned aerial systems has become critical as organizations across the Middle East increasingly deploy drones for industrial inspection, surveillance, and operational applications. Enterprises face unique challenges with protecting drone platforms, securing communication channels, and preventing unauthorized access to sensitive aerial systems and data. In response to these challenges, **Cipher offers comprehensive** Drone Cybersecurity services, providing specialized expertise to identify vulnerabilities, implement protections, and ensure the secure operation of drone fleets throughout their deployment lifecycle

CIPHER

Drone Services Data sheets

# What's Included in Cipher's Drone Cybersecurity Services?

**01 Drone Platform Security Assessment**

: Comprehensive evaluation of drone hardware, firmware, control systems, and communication links for security vulnerabilities.

**02 Command & Control Security**

Hardening of drone control channels, authentication mechanisms, and operator interfaces against interception and hijacking

**03 Data Protection Implementation**

Securing of sensor data, imagery, telemetry, and other sensitive information collected and transmitted by aerial platforms

**04 Anti-Spoofing & Jamming Controls**

Implementation of countermeasures against GPS spoofing, signal jamming, and other electronic interference techniques

**05 Drone Detection & Response**

Deployment of systems to identify unauthorized drones and implement appropriate countermeasures to protect facilities

**06 CREST-Accredited Methodology**

Industry-leading drone security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Platform-specific expertise

Specialized knowledge across major commercial drone platforms, custom industrial systems, and proprietary implementations

### Mission risk profiling

Security controls tailored to specific operational uses including infrastructure inspection, perimeter security, and sensitive facility surveillance

### Regulatory compliance

Security implementations aligned with relevant aviation authorities, spectrum regulations, and airspace requirements across the Middle East region

CIPHER

SIEM Services Data sheets

# Elastic SIEM Deployment & Consultancy Services

Implementing effective security monitoring solutions has become essential for organizations seeking to enhance threat detection capabilities and security visibility. Enterprises across the Middle East face challenges with deploying, configuring, and optimizing Elasticsearch-based SIEM solutions that meet their specific security and compliance requirements. In response to these challenges, Cipher offers comprehensive Elastic SIEM Deployment & Consultancy services, providing expert guidance and implementation support to maximize the value of your Elastic security investments while accelerating time-to-value.

CIPHER

SIEM Services Data sheets

# What's Included in Cipher's MDR Services?

1

### Elastic Security Architecture Design

Development of optimized architectures for Elastic SIEM deployments tailored to your environment scale and requirements

2

### Implementation & Configuration

Expert deployment of Elastic Stack components including Elasticsearch, Kibana, and Elastic Agent with security best practices

3

### Data Source Integration

Configuration of log collection from diverse sources including endpoints, servers, networks, cloud environments, and applicati

4

### Detection Rule Development

Creation of custom detection rules and alert logic aligned with your specific threat profile and security priorities

5

### Dashboard & Visualization Design

Development of tailored dashboards and visualizations for security operations, executive reporting, and compliance needs

6

### CREST-Accredited Methodology

Industry-leading SIEM implementation approach validated by CREST's rigorous global certification standards

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Elastic-certified specialists

Implementation by consultants with advanced Elastic certifications and extensive deployment experience

### Scalable architecture design

Solutions engineered for performance, scalability, and resilience even in large, complex environments

### Knowledge transfer focus

Comprehensive training and documentation ensuring your team can effectively manage and utilize the platform

Supply Chain Services Data sheets

Hardware

# Hardware Supply Chain Security Services

Securing hardware supply chains has become critical as organizations face increasing risks from compromised components, tampering, and malicious implants. Enterprises across the Middle East, particularly in critical infrastructure, defense, and financial sectors, struggle with validating hardware authenticity, detecting unauthorized modifications, and ensuring the integrity of physical technology assets. In response to these challenges, **Cipher offers comprehensive** Hardware Supply Chain Security services, providing specialized expertise to identify, assess, and mitigate risks throughout the hardware lifecycle from procurement to decommissioning.

CIPHER

Hardware Supply Chain Services Data sheets

# What's Included in Cipher's Hardware Supply Chain Security Services?

01

### Hardware Supply Chain Risk Assessment

Comprehensive mapping and evaluation of your hardware procurement channels, manufacturers, and logistics processes

02

### Component Verification & Validation

Implementation of testing regimes to detect counterfeit, tampered, or compromised hardware components

03

### Hardware Security Testing

Specialized analysis including physical inspection, firmware verification, and hardware debugging to identify implants or modifications

04

### Secure Hardware Procurement Framework

Development of policies, procedures, and verification processes for acquiring trusted hardware assets

05

### Secure Asset Management

Implementation of chain-of-custody controls, secure storage, and tamper-evident mechanisms for critical hardware

06

### CREST-Accredited Methodology

Industry-leading hardware security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Device-specific expertise

Specialized capabilities for diverse hardware including network equipment, servers, industrial controllers, security appliances, and mobile devices

### Multi-level verification

Layered approach combining visual inspection, electrical testing, x-ray analysis, and advanced firmware validation

### Secure supplier qualification

Systematic evaluation and certification of hardware vendors based on manufacturing security, quality controls, and supply chain transparency

Securing the rapidly expanding Internet of Things ecosystem has become critical as organizations across the Middle East deploy connected devices throughout their operations. Enterprises face significant challenges with protecting diverse IoT assets, ensuring secure communications, and integrating these devices into existing security frameworks. In response to these challenges, **Cipher offers comprehensive** IoT Cybersecurity services, providing specialized expertise to identify vulnerabilities, implement protections, and maintain security across the entire IoT lifecycle from device deployment to decommissioning.

CIPHER

# What's Included in Cipher's Industrial IoT Cybersecurity Services?

1

### OT/IIoT Security Architecture

Development of secure reference architectures for industrial environments that balance protection with operational requirements

2

### IIoT Risk Assessment

Specialized evaluation of industrial connected devices, control systems, and integration points with IT environments to identify security risks

3

### IIoT Threat Monitoring

Implementation of non-intrusive monitoring solutions for detecting anomalies and threats within industrial networks and devices

4

### Industrial Protocol Security

Expert analysis and hardening of industrial protocols including Modbus, Profinet, OPC-UA, and proprietary communication mechanisms

5

### CREST-Accredited Methodology

Industry-leading industrial security approach validated by CREST's rigorous global certification standards

6

### ICS/SCADA Security Controls

Deployment of specialized protection measures for industrial control systems, PLCs, RTUs, and SCADA environments

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Availability-focused approach

Security strategies designed to maintain operational continuity and prevent production impacts

### Safety system protection

Specialized controls for safeguarding critical safety instrumented systems and emergency shutdown capabilities

### IT/OT convergence security

Comprehensive protection for increasingly connected industrial environments spanning both IT and OT domains

CIPHER

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

## Trusted by Regional Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

## Industry Recognition

Recognized as MDR Middle East leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company in the Middle East and Greece.

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Industrial Sector Expertise

Deep experience securing industrial environments across oil & gas, manufacturing, utilities, and critical infrastructure throughout the Middle East, with understanding of region-specific industrial technology deployments and threat landscapes.

In response to these challenges, **Cipher offers comprehensive** IoT Cybersecurity services, providing specialized expertise to identify vulnerabilities, implement protections, and maintain security across the entire IoT lifecycle from device deployment to decommissioning.

# What's Included in Cipher's IoT Cybersecurity Services?

01

### IoT Security Assessment

Comprehensive evaluation of IoT devices, communications, backend systems, and management platforms for security vulnerabilities.

02

### Device Security Testing

Specialized testing of IoT hardware, firmware, and communication protocols to identify exploitable weaknesses

03

### Secure Architecture Design

Development of reference architectures implementing defense-in-depth strategies for IoT deployments across various environments

04

### Network Segmentation Strategy

Design of secure network architectures isolating IoT devices from critical systems while maintaining operational functionality

05

### CREST-Accredited Methodology

Industry-leading IoT security approach validated by CREST's rigorous global certification standards

06

### IoT Security Monitoring

Implementation of specialized detection capabilities for identifying anomalous behaviors and threats across IoT ecosystems

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Diverse device expertise

Security capabilities spanning industrial IoT, building management systems, medical devices, consumer IoT, and specialized operational technology

### Lifecycle security approach

Comprehensive protection strategies covering procurement, deployment, operations, maintenance, and decommissioning phases

### Risk-based prioritization

Security recommendations balancing protection requirements with operational constraints and resource limitations

# IOT/OT SOC Services

## Executive Overview

Securing operational technology and IoT environments has become critical as organizations across Europe, the Middle East, and Africa face increasing convergence between IT and OT systems, sophisticated threats targeting industrial infrastructure, and expanding IoT deployments. Enterprises struggle with limited visibility into OT/IoT assets, challenges detecting specialized threats, and maintaining operational continuity while enhancing security. In response to these challenges, Cipher offers comprehensive IOT/OT SOC Services, providing specialized expertise to monitor, detect, and respond to threats targeting industrial control systems, operational technology, and connected devices across the EMEA region.

# What's Included in Cipher's IOT/OT SOC Services?

**1**

### OT/IoT Asset Discovery & Visibility

Comprehensive identification and monitoring of operational technology assets, industrial control systems, and connected devices

**2**

### Industrial Protocol Monitoring

Specialized detection for OT-specific protocols including Modbus, DNP3, ICS, BACnet, PROFINET, and proprietary industrial communications.

**3**

### OT Threat Detection & Analysis

Advanced detection capabilities for threats targeting industrial environments with specialized OT attack pattern recognition

**4**

### IoT Security Monitoring

Dedicated monitoring for IoT ecosystems with device behavior analysis, anomaly detection, and compromise identification

**5**

### OT/IT Convergence Protection

Unified security monitoring across IT, OT, and IoT environments with specialized focus on convergence points and boundary defences

**6**

### CREST-Accredited Methodology

Industry-leading OT security approach validated by CREST's rigorous global certification standards

## KEY SERVICE COMPONENTS

**IoT Device Visibility** Comprehensive discovery and continuous monitoring of connected devices across your environment

**IoT Platform Security** Monitoring of IoT management platforms, gateways, and data collection infrastructure

**Behavioural Anomaly Detection** AI-driven analysis of device communications and activities to identify compromised devices

**Supply Chain Compromise Detection** Specialized monitoring for indicators of supply chain attacks against IoT ecosystems

CIPHER

IOT/OT SOC Services Data sheets

# INTEGRATED RESPONSE CAPABILITIES

### OT-Aware Incident Response

Specialized handling of OT security incidents with focus on operational continuity and safety

### OT/IoT Specific Playbooks

Tailored response procedures for industrial systems and connected device incidents

### Industry Collaboration

Integration with sector-specific information sharing groups and regulatory reporting frameworks

### Recovery Orchestration

Coordinated restoration capabilities designed for OT environments and connected infrastructure

# Highlights

1

**CREST-Certified Expertise**

Benefit from OT/IoT security delivered by professionals meeting the highest global technical standards.

2

**Industry-specific knowledge**

Specialized understanding of diverse operational environments including manufacturing, energy, utilities, healthcare, and

3

**OT-native approach**

Security operations designed specifically for operational technology requirements, constraints, and safety considerations

4

**Regional threat intelligence**

Focused insight on threat actors and campaigns targeting critical infrastructure and industrial systems across EMEA

CIPHER

MDR Services Data sheets

# Managed Detection & Response (MDR) Services

Effectively detecting and responding to sophisticated cyber threats has become increasingly challenging for organizations facing resource constraints and complex attack techniques. Enterprises across the Middle East struggle with maintaining 24/7 security vigilance, rapidly containing threats, and accessing the specialized expertise needed to combat advanced adversaries. In response to these challenges, **Cipher offers comprehensive** Managed Detection & Response services, providing continuous threat monitoring, advanced detection capabilities, and expert-driven response to identify and neutralize threats before they impact your business.

CIPHER

MDR Services Data sheets

# What's Included in Cipher's MDR Services?

1

### 24/7 Threat Monitoring

Continuous surveillance of your environment by expert security analysts using advanced detection technologies

2

### Advanced Threat Detection

Sophisticated detection capabilities leveraging machine learning, behavioral analytics, and threat intelligence to identify complex attacks.

3

### Proactive Threat Hunting

Regular searches for hidden threats and suspicious activities that may evade automated detection methods

4

### Rapid Incident Response

Expert-guided containment, investigation, and remediation support when threats are detected.

5

### Security Technology Management

Complete administration of endpoint, network, and cloud detection technologies including tuning, updates, and optimization

6

### CREST-Accredited Service

Industry-leading MDR approach validated by CREST's rigorous global certification standards.

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Regional threat intelligence

Detection capabilities enhanced with specific intelligence on threats targeting Middle Eastern organizations

### Multi-vector coverage

Comprehensive protection across endpoints, networks, cloud environments, email, and identity systems

### Containment capabilities

Remote response actions to isolate compromised systems and prevent threat propagation

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

## Trusted by Regional Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

MDR Services Data sheets

# MDR Services for Small & Medium Businesses

Protecting against sophisticated cyber threats has become essential yet increasingly challenging for small and medium businesses across the EMEA region. With limited security resources, budget constraints, and complex regulatory requirements spanning Europe, Middle East, and Africa, many SMBs struggle to implement effective threat detection and response capabilities. In response to these challenges, **Cipher offers** tailored Managed Detection & Response services specifically designed for EMEA-based small and medium businesses, providing enterprise-grade security protection that's affordable, compliant, and aligned with the unique needs of regional SMBs

CIPHER

# What's Included in Cipher's EMEA SMB-Focused MDR Services?

### Simplified Security Deployment

Rapid implementation of endpoint and network monitoring with minimal infrastructure requirements and IT burden

1

### 24/7 Threat Monitoring

Continuous surveillance of your environment by expert security analysts using advanced detection technologies

2

### Regional Compliance Coverage

Protection aligned with key regulatory frameworks including GDPR, NIS2, DPA, NCA, SAMA, and POPIA relevant to EMEA businesses

3

### Guided Response Support

Step-by-step remediation assistance when threats are detected, with clear instructions for non-security specialists

4

### Multilingual Support

Security assistance available in multiple languages common across the EMEA region to facilitate effective communication

5

### CREST-Accredited Protection

Enterprise-grade security approach validated by CREST's rigorous standards, scaled appropriately for SMB environments

6

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### SMB-optimized solution

Security protection specifically designed for the resources, skills, and infrastructure typical in small and medium businesses

### Regional data sovereignty

Flexible deployment options to address data residency requirements across different EMEA jurisdictions

### Fixed, predictable pricing

Transparent, per-device pricing model without hidden costs, making budgeting straightforward for SMBs

# What Makes Cipher Unique?

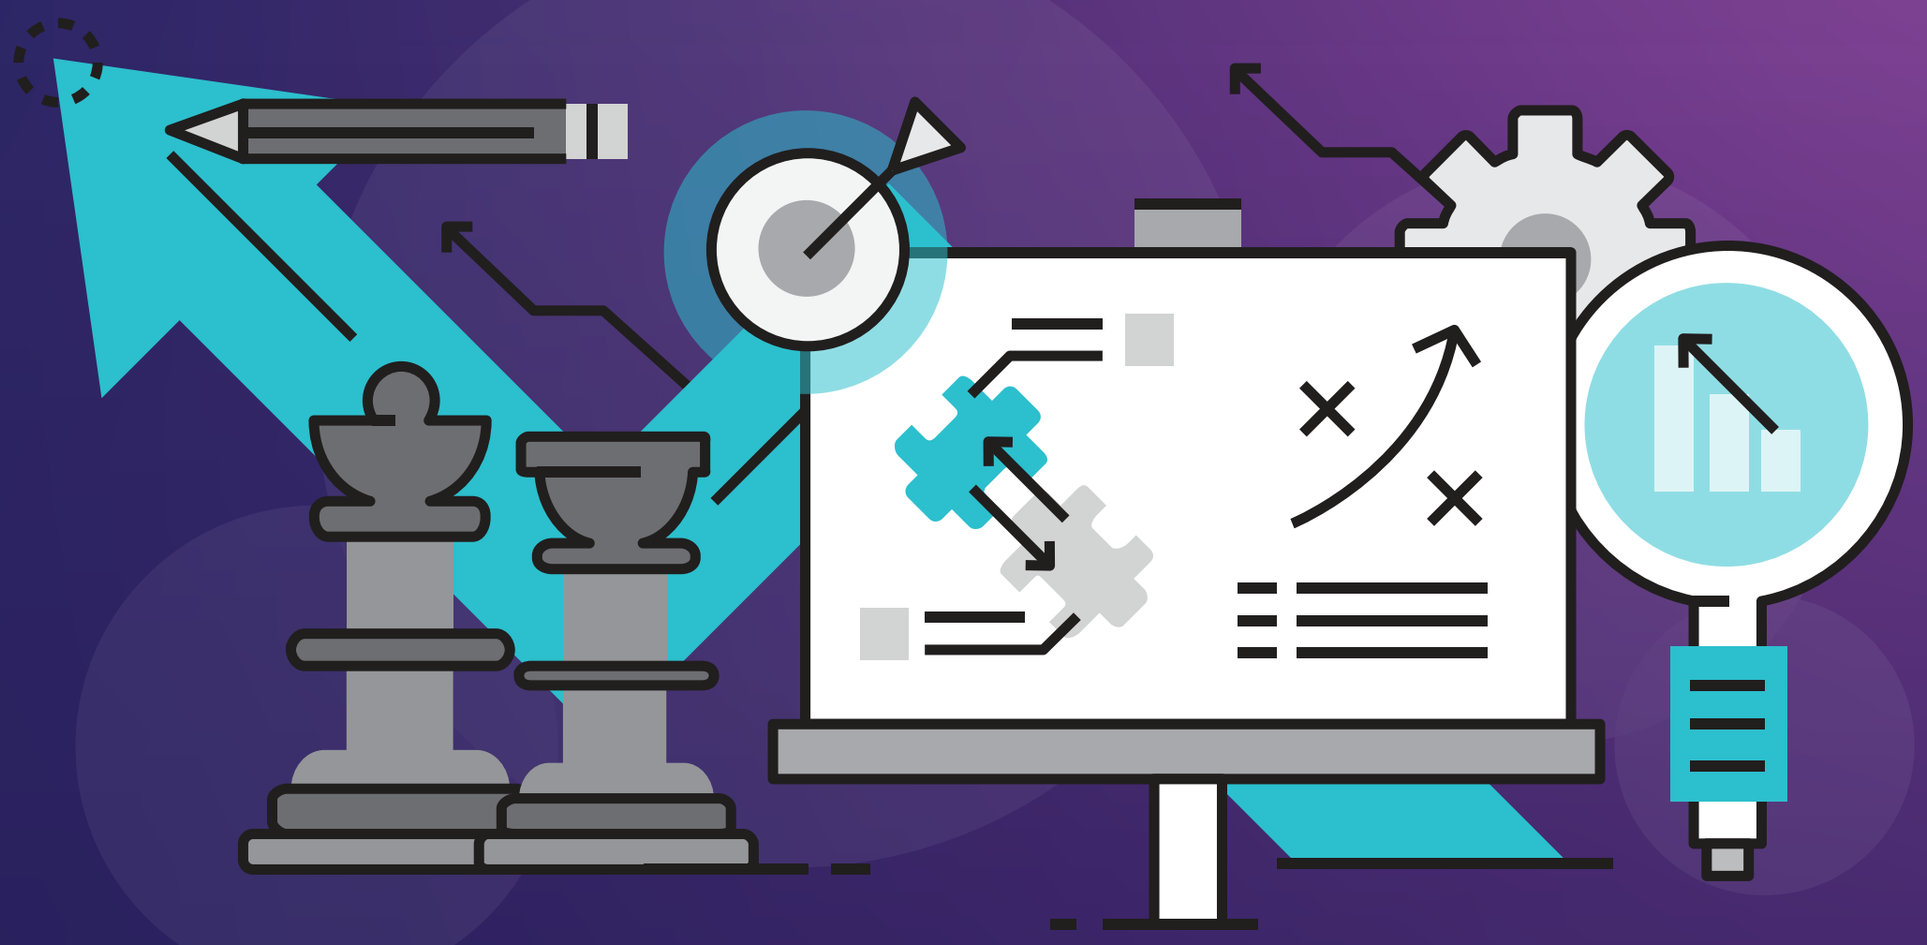
CIPHER

Strategy Development Services Data sheets



# National Cybersecurity Strategy Development Services

## Executive Overview

Developing comprehensive national cybersecurity strategies has become critical as governments across Europe, the Middle East, and Africa work to protect digital sovereignty, secure critical infrastructure, and build cyber resilience at the national level. Countries face significant challenges in creating cohesive cybersecurity visions, establishing effective governance structures, and implementing actionable strategic frameworks. In response to these challenges, Cipher offers comprehensive National Cybersecurity Strategy Development Services, providing specialized expertise to create, enhance, and implement national-level cybersecurity strategies tailored to each country's unique priorities, capabilities, and threat landscape across the EMEA region

CIPHER

# What's Included in Cipher's National Cybersecurity Strategy Services?

1

### Strategic Vision Development

Creation of comprehensive national cybersecurity vision and mission statements aligned with broader national priorities

2

### Multi-Stakeholder Engagement

Facilitation of inclusive strategy development processes involving government, private sector, academia, and civil society.

3

### Strategic Framework Design

Development of structured cybersecurity strategic frameworks with clear pillars, objectives, and implementation mechanisms

4

### Implementation Roadmap Creation

Detailed action planning with prioritized initiatives, resource requirements, and measurable outcomes.

5

### Governance Model Development

Design of effective national coordination structures, roles, and institutional frameworks for strategy execution

6

### CREST-Accredited Methodology

Industry-leading approach validated by CREST's rigorous global certification standards.

CIPHER

# Our Strategy Development Approach

## 1 SITUATIONAL ASSESSMENT

**Current State Analysis :**

Comprehensive assessment of existing cybersecurity capabilities, policies, and initiatives

**Threat Landscape Evaluation :**

Analysis of nation-specific cyber threats, vulnerabilities, and priority risk areas

**Stakeholder Mapping :**

Identification of key government agencies, critical sectors, and essential participants

**International Benchmark Analysis :**

Comparative assessment against peer nations and international standards

**Strategic Context Review :**

Alignment with national development goals, digital transformation agendas, and security priorities

## 2 STRATEGIC VISIONING

**Vision Development :**

Collaborative creation of comprehensive national cybersecurity vision and guiding principles

**Strategic Priorities Identification :**

Determination of key focus areas and strategic imperatives

**Strategic Objectives Definition :**

Development of clear, measurable goals across multiple cybersecurity domains

**Success Criteria Establishment :**

Definition of key performance indicators and strategic outcomes

**Strategic Framework Design :**

Creation of structured approach organizing objectives into coherent pillars or domains

## 3 STRATEGY FORMULATION

**Strategic Pillar Development :**

Detailed elaboration of each strategic domain with specific objectives and initiatives

**Cross-Cutting Themes Integration :**

Incorporation of foundational elements spanning multiple strategic pillars

**Governance Structure Design :**

Creation of national coordination mechanisms and institutional frameworks

**Multi-Stakeholder Roles Definition :**

Clarification of responsibilities across government, industry, and society

**International Alignment :**

Harmonization with international standards, regional initiatives, and global best practices

## 4 IMPLEMENTATION PLANNING

**Action Plan Development :**

Creation of detailed implementation roadmaps for each strategic objective

**Resource Requirements Analysis :**

Assessment of human, financial, and technical resources needed for execution

**Timeframe Establishment :**

Definition of short, medium, and long-term implementation horizons

**Responsibility Assignment :**

Clear allocation of implementation ownership across relevant stakeholders

**Performance Measurement Framework :**

Development of monitoring and evaluation mechanisms for tracking progress

## 5 STAKEHOLDER ENGAGEMENT & VALIDATION

**Consultation Workshops :**

Facilitation of inclusive stakeholder sessions to gather input and build consensus

**Strategy Socialization :**

Presentation and validation of strategic approach with key national stakeholders

**Feedback Integration :**

Incorporation of stakeholder input into refined strategy documents

**Political Alignment :**

Support for securing high-level political endorsement and commitment

**Public Communication Planning :**

Development of approaches for effectively communicating the strategy

# Strategy Components

## OUR NATIONAL CYBERSECURITY STRATEGY DEVELOPMENT TYPICALLY ADDRESSES THESE ESSENTIAL DOMAINS:

1 **Governance & Institutional Framework :** National coordination structures and institutional capabilities

2 **Legal & Regulatory Foundation :** Legislative frameworks and regulatory mechanisms

3 **Critical Infrastructure Protection :** Securing essential national services and systems

4 **Incident Response & Resilience :** National CERT/CSIRT capabilities and crisis management

5 **Cybersecurity Awareness & Education :** Building national cybersecurity culture and skills

6 **Industry & Economic Development :** Cybersecurity sector growth and digital economy protection

7 **International Cooperation :** Cross-border collaboration and global engagement

8 **Research & Innovation :** National cybersecurity R&D and technological advancement

CIPHER

Strategy Development Services Data sheets

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for national cybersecurity strategy development across the entire region

## Trusted by Governments

Authorized security partner for multiple national cybersecurity authorities, CERTs, and regulatory bodies across EMEA.

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices

## Comprehensive Regional Experience

Unparalleled understanding of diverse national contexts across Europe, the Middle East, and Africa, having supported multiple governments in developing cybersecurity strategies that balance international best practices with local realities, resulting in truly implementable strategies that address each nation's unique political structures, economic priorities, technical capabilities, and cultural considerations rather than generic approaches that fail to account for national context.

# Office 365 Security Services

Securing Microsoft Office 365 environments has become critical as organizations across the Middle East increasingly rely on cloud-based productivity suites for their core business operations. Enterprises face significant challenges with protecting sensitive data in Office 365, securing collaboration tools, and defending against sophisticated phishing and account compromise attacks. In response to these challenges, **Cipher offers comprehensive** Office 365 Security services, providing specialized expertise to secure your cloud productivity environment, implement effective controls, and continuously protect against evolving threats targeting Office 365.

CIPHER

# What's Included in Cipher's Office 365 Security Services?

**1**

### Office 365 Security Assessment

Comprehensive evaluation of your Office 365 tenant's security configuration, settings, and alignment with best practices

**2**

### Microsoft Defender for Office 365 Optimization

Implementation and tuning of advanced threat protection capabilities for email, SharePoint, OneDrive, and Teams

**3**

### Office 365 Identity Security

Hardening of authentication systems with secure MFA implementation, conditional access policies, and identity protection measures

**4**

### Data Protection for Office 365

Configuration of information protection controls, DLP policies, and encryption mechanisms for sensitive content

**5**

### Office 365 Security Monitoring

Continuous surveillance of Office 365 environments for suspicious activities, unauthorized access, and potential compromises

**6**

### CREST-Accredited Methodology

Industry-leading Office 365 security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from Office 365 security delivered by professionals meeting the highest global technical standards

### Microsoft-certified specialists

Team of security professionals with advanced Microsoft certifications and specialized Office 365 security expertise

### Comprehensive protection framework

Multi-layered security approach addressing identity, data, applications, and infrastructure aspects of Office 365

### Regulatory compliance focus

Implementation strategies ensuring Office 365 deployments meet regional data protection and sovereignty requirements

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

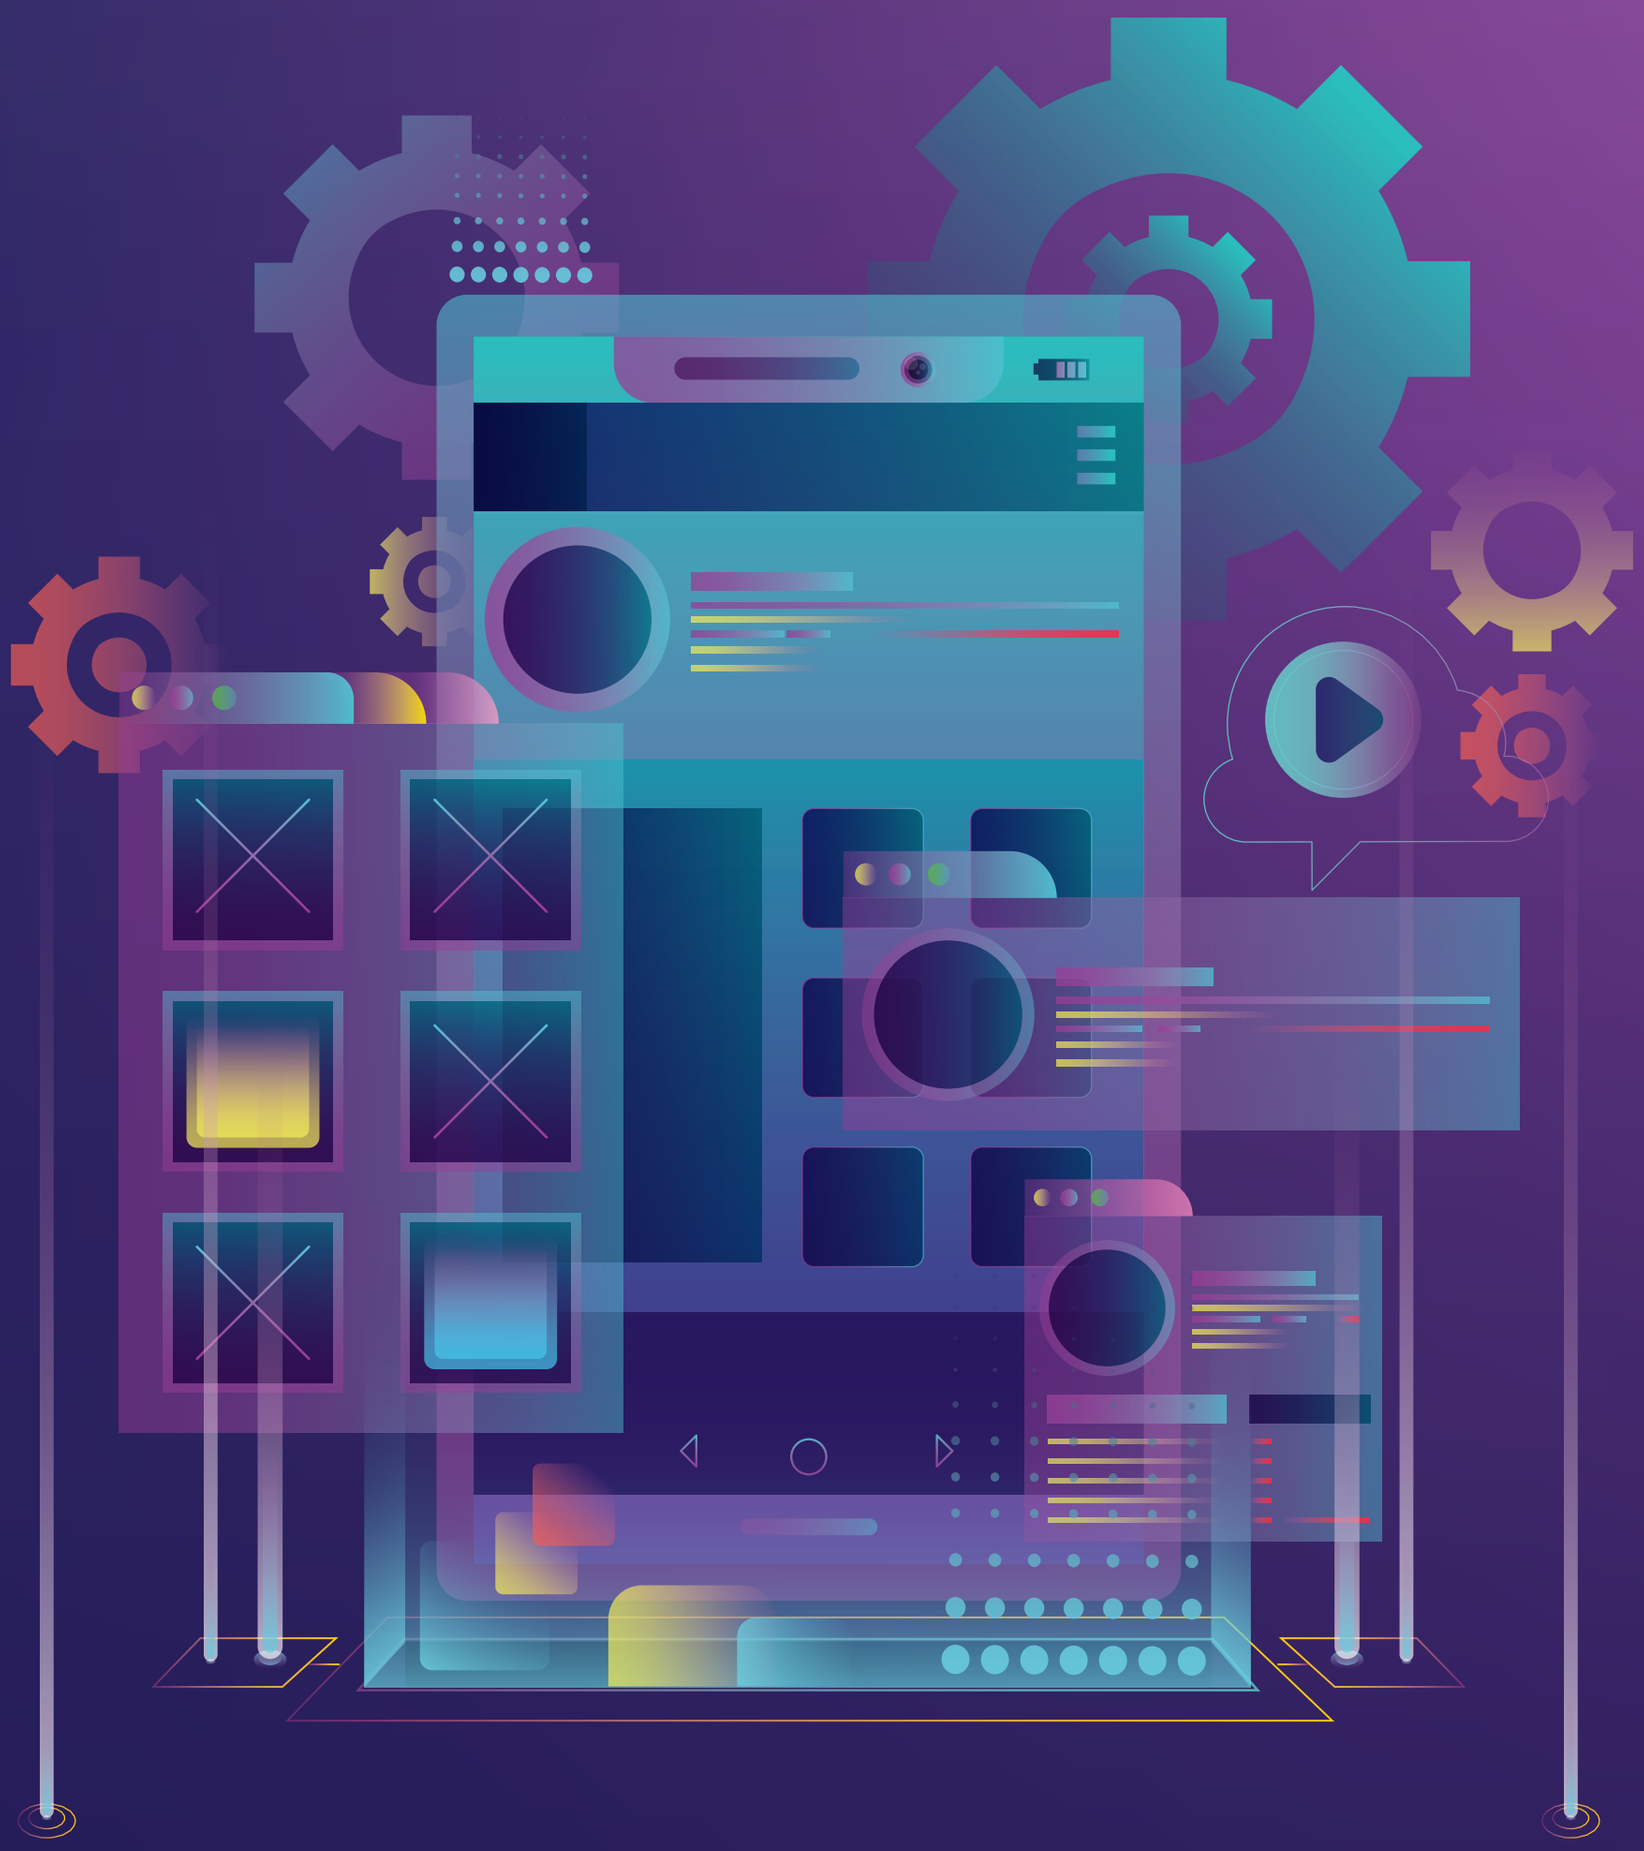
OT Services Data sheets



# Operational Technology (OT) Cybersecurity Services

Securing industrial control systems and operational technology has become critical as organizations across the Middle East face increasing cyber threats targeting critical infrastructure and industrial operations. Enterprises in energy, manufacturing, utilities, and transportation sectors struggle with protecting legacy OT environments, ensuring operational continuity, and addressing the unique security challenges of industrial systems. In response to these challenges, **Cipher offers comprehensive** OT Cybersecurity services, providing specialized expertise to secure industrial environments while maintaining operational reliability, safety, and production efficiency.

# What's Included in Cipher's OT Cybersecurity Services?

### 1 OT Security Assessment

Comprehensive evaluation of industrial control systems, SCADA environments, and operational networks for security vulnerabilities and exposures.

### 2 Industrial Network Security

Design and implementation of secure network architectures, segmentation strategies, and defense-in-depth approaches for OT environments.

### 3 ICS/SCADA Security Controls

Deployment of specialized protection measures for PLCs, RTUs, HMIs, engineering workstations, and other industrial components

### 4 OT Monitoring & Threat Detection

Implementation of non-intrusive monitoring solutions for identifying anomalies and threats within operational technology networks

### 5 OT/IT Convergence Security

Strategic approaches for securing increasingly connected industrial environments while managing the IT/OT security boundary

### 6 CREST-Accredited Methodology

Industry-leading OT security approach validated by CREST's rigorous global certification standards.

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from OT security delivered by professionals meeting the highest global technical standards.

### Availability-prioritized approach

Security strategies designed to maintain operational continuity and prevent production impacts.

### Safety system protection

Specialized controls for safeguarding critical safety instrumented systems and emergency shutdown capabilities

### OT-specific compliance

Security implementations aligned with industrial standards including IEC 62443, NERC CIP, and regional critical infrastructure requirements

# What Makes Cipher Unique?

CIPHER

PT Penetration Testing & Vulnerability Assessment Service

# Penetration Testing and Vulnerability Assessment Services

Cipher delivers comprehensive security testing and vulnerability management services to help organizations across the Middle East identify, prioritize, and remediate security weaknesses before attackers can exploit them. As cyber threats continue to evolve in sophistication and frequency, our expert-led testing services provide the critical visibility needed to strengthen your security posture and protect vital assets.

CIPHER

PT & Vulnerability Assessment Service

# What's Included in Cipher's Penetration Testing and Vulnerability Services?

1

### External Penetration Testing

Simulated attacks against internet-facing systems to identify vulnerabilities accessible to external threat actors.

2

### Internal Penetration Testing

In-depth assessment of internal networks to identify security weaknesses that could be exploited once perimeter defenses are breached

3

### Web Application Testing

Comprehensive security evaluation of web applications to detect vulnerabilities in design, code, and implementation

4

### Mobile Application Testing

Specialized assessment of iOS and Android applications to identify security flaws and data protection issues

5

### API Security Testing

Evaluation of API endpoints, authentication mechanisms, and data handling to prevent unauthorized access

6

### Cloud Security Assessment

Testing of cloud infrastructure, configurations, and deployments to identify misconfigurations and security gaps

7

### Vulnerability Management Program

Development and implementation of continuous vulnerability assessment processes and remediation workflows

# Highlights

1

### CREST-Certified Methodology

Testing conducted according to globally recognized standards ensuring comprehensive coverage and reliable results

2

### Business-Focused Reporting

Clear, actionable findings with practical remediation guidance prioritized by business impact

3

### Regional Threat Context

Assessments informed by specific threat actors and attack patterns targeting Middle Eastern organizations

4

### Zero False Positives

Manual verification of all findings to eliminate false positives and focus remediation efforts on genuine security issues

CIPHER

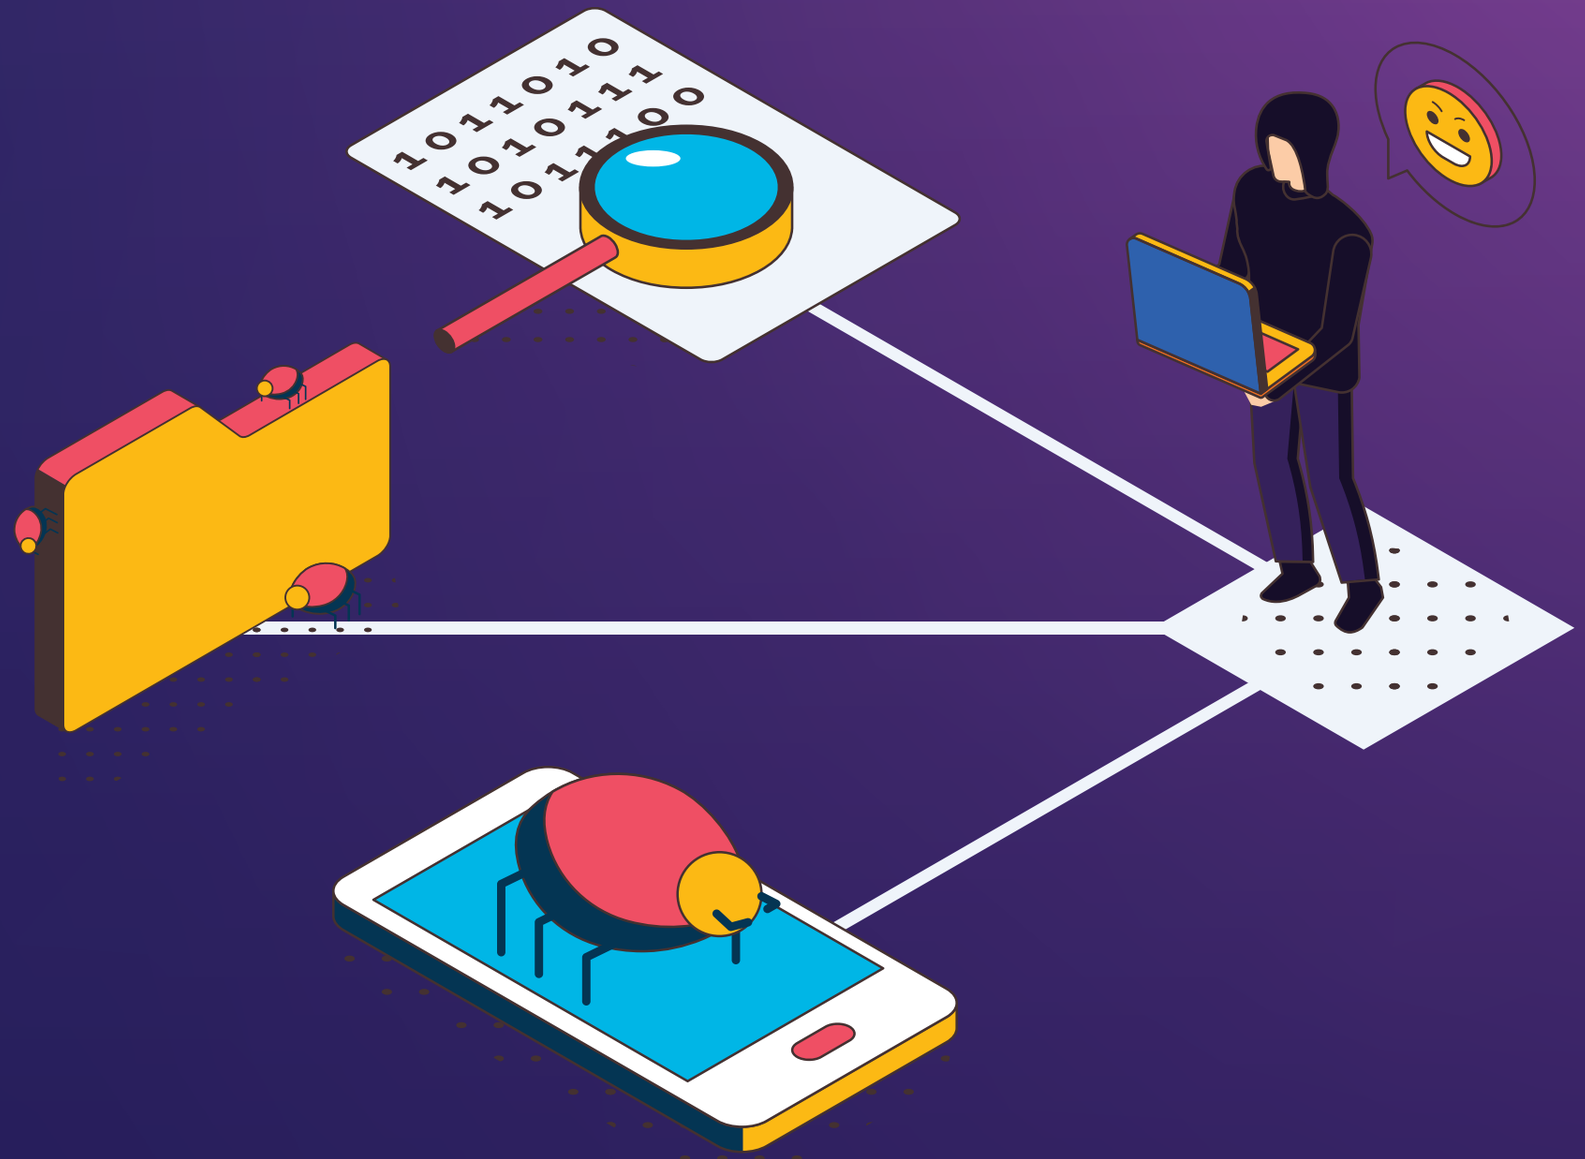
CIPHER

Ransomware Simulation Service



# Ransomware Simulation Services

Cipher's Ransomware Simulation Services provide organizations across the Middle East with realistic exercises that test preparedness against one of the most devastating cyber threats facing the region. By safely emulating actual ransomware attack techniques, our specialized team helps you identify vulnerabilities in your defenses, validate detection capabilities, and enhance your incident response procedures before a real attack occurs.

CIPHER

Ransomware Simulation Service

# What's Included in Cipher's Red Team Services?

1

### Tailored Attack Scenarios

Customized simulations based on ransomware variants and threat actors specifically targeting your industry in the Middle East

2

### Multi-Stage Attack Chains

Complete attack simulations covering initial access, lateral movement, privilege escalation, and encryption preparation

3

### Safe Encryption Simulation

Controlled demonstration of encryption capabilities without causing actual business disruption

4

### Detection Capability Testing

Assessment of your ability to identify ransomware-specific behaviors across the attack lifecycle

5

### Response Procedure Validation

Evaluation of incident response effectiveness, including containment strategies and recovery procedures

6

### Business Continuity Assessment

Testing of backup systems, recovery processes, and resilience measures against ransomware scenarios

7

### Executive-Level Reporting

Clear documentation of findings with strategic recommendations and prioritized remediation guidance

# Highlights

### CREST-Certified Methodology

Simulations conducted according to globally recognized standards ensuring safe, controlled, and valuable exercises

### Regional Ransomware Intelligence

Scenarios based on current ransomware campaigns specifically targeting Middle Eastern organizations.

### Risk-Controlled Execution

Rigorous safety measures to prevent business disruption while maintaining realistic attack simulations.

### Cross-Functional Engagement

Involvement of IT, security, business continuity, and executive stakeholders to test organizational response holistically

CIPHER

Red Team Service

# Red Team Services

Cipher's Red Team Services provide organizations across the Middle East with realistic, full scope simulated attacks that test security controls, detection capabilities, and incident response procedures against advanced adversaries. Unlike traditional penetration testing, our red team operations employ sophisticated tactics, techniques, and procedures (TTPs) used by actual threat actors targeting regional organizations, delivering an authentic assessment of your security program's effectiveness against real-world attacks

# What's Included in Cipher's Red Team Services?

**1**

### Objective–Based Scenarios

Customized attack simulations focused on your organization's most critical assets and business-specific threats

**2**

### Multi–Vector Attack Paths

Comprehensive testing across physical, technical, and human attack surfaces to identify complete attack chains

**3**

### Advanced Adversary Emulation

Simulation of specific threat actor behaviors and TTPs known to target your industry and region

**4**

### Social Engineering Campaigns

Sophisticated phishing, vishing, and physical social engineering tactics to test human security awareness

**5**

### Evasion Technique Testing

Assessment of your ability to detect and respond to sophisticated evasion and persistence mechanisms

**6**

### Purple Team Opportunities

Collaborative exercises to improve defensive capabilities based on red team findings.

**7**

### Executive Reporting

Strategic insights and recommendations with clear business impact analysis and improvement roadmaps

# Highlights

### CREST–Certified Methodology

Operations conducted according to globally recognized standards ensuring ethical, controlled, and valuable assessments

### Specialized Regional Expertise

Deep understanding of threat actors and attack methodologies specifically targeting Middle Eastern organizations

### Risk–Controlled Execution

Rigorous safety measures and continuous communication to prevent business disruption while maintaining realistic

Robotics Services Data sheets

# Robotics Cybersecurity Services

Securing robotic systems has become critical as organizations across the Middle East increasingly deploy automation technologies in industrial, healthcare, logistics, and service applications. Enterprises face unique challenges with protecting robot platforms, securing control systems, and preventing unauthorized manipulation of automated processes. In response to these challenges, **Cipher offers comprehensive** Robotics Cybersecurity services, providing specialized expertise to identify vulnerabilities, implement protections, and ensure the secure operation of robotic systems throughout your environment.

CIPHER

# What's Included in Cipher's Robotics Cybersecurity Services?

1

### Robotic Platform Security Assessment

Comprehensive evaluation of robot hardware, firmware, control systems, and communication interfaces for security vulnerabilities.

2

### Industrial Robot Security

Specialized protection for manufacturing robots, including programmable logic controllers, teach pendants, and integration with industrial control systems.

3

### Collaborative Robot (Cobot) Security

Tailored security controls for robots operating alongside humans, with emphasis on safety-critical systems and human-robot interfaces.

4

### Autonomous Mobile Robot Protection

Security frameworks for logistics robots, autonomous vehicles, and mobile platforms operating in dynamic environments

5

### Robot Fleet Management Security

Hardening of centralized control systems managing multiple robotic units across distributed facilities

6

### CREST-Accredited Methodology

Industry-leading camera security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from robotics security delivered by professionals meeting the highest global technical standards

### Safety-critical focus

Security controls designed to maintain safety integrity levels and prevent compromises that could lead to physical harm

### Multi-vendor capability

Specialized knowledge across major robotics platforms, manufacturers, and proprietary systems deployed throughout the region

### Secure integration approach

Protection strategies for robotic systems connecting with enterprise networks, cloud platforms, and operational technology environments

CIPHER

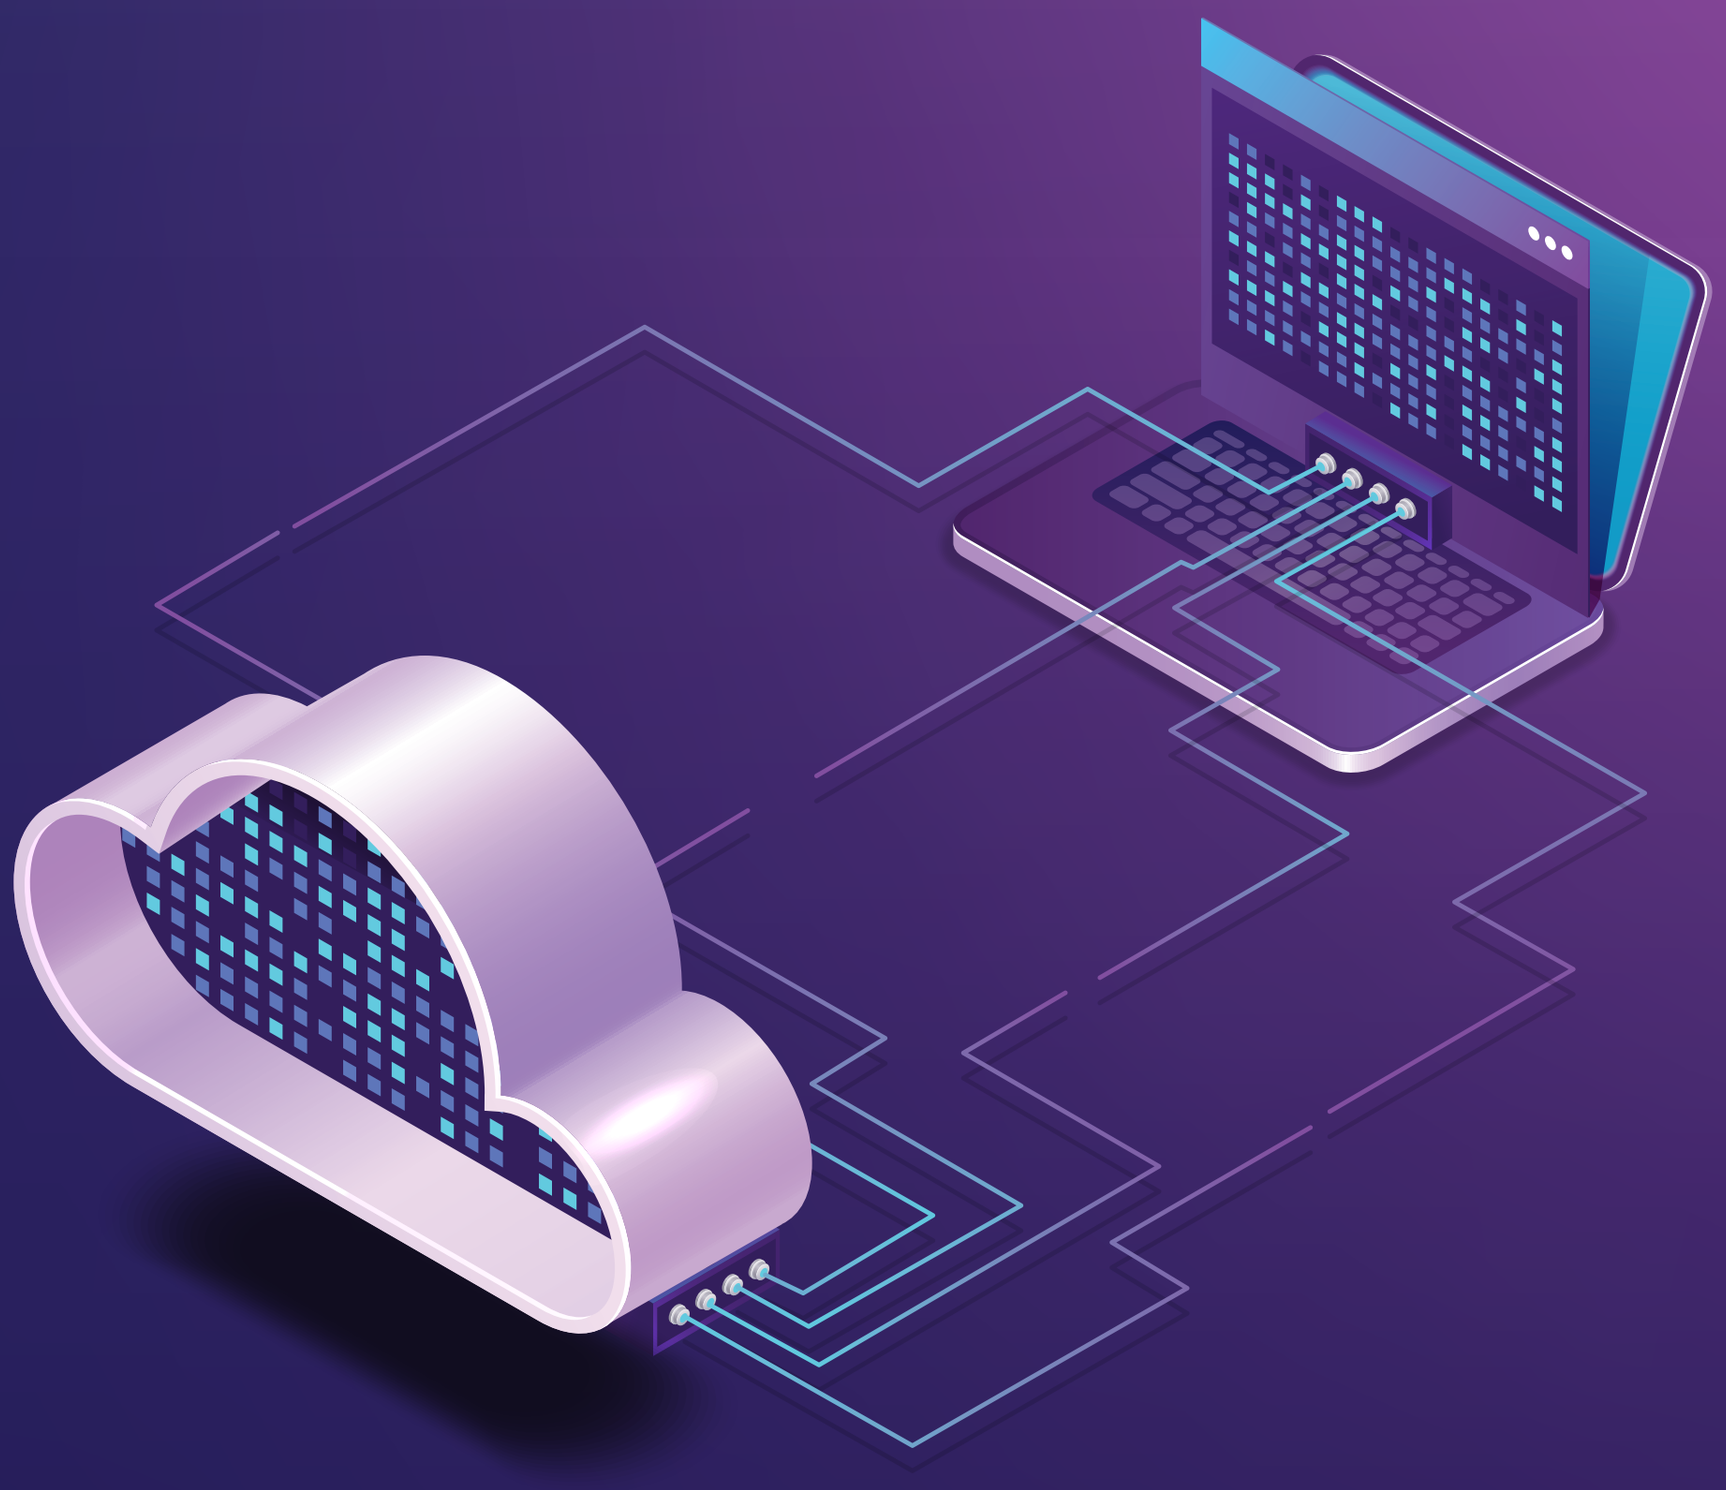
SASE Services Services Data sheets



# SASE Services

Securing distributed networks has become critical as organizations across Europe, the Middle East, and Africa embrace cloud transformation, remote work models, and edge computing. Enterprises struggle with fragmented security architectures, inconsistent policy enforcement, and increased attack surface across distributed environments. In response to these challenges, Cipher offers comprehensive Secure Access Service Edge (SASE) services, providing specialized expertise to design, implement, and manage converged network and security solutions tailored to your organization's unique requirements across the EMEA region

CIPHER

SASE Services Services Data sheets

# What's Included in Cipher's SASE Services?

**SASE Architecture Assessment**

Comprehensive evaluation of your current network and security infrastructure with roadmap development for SASE transformation

1

**Zero Trust Network Access Implementation**

Design and deployment of ZTNA solutions providing secure, identity-based access to applications and services

2

**Cloud-Delivered Security**

Implementation of integrated cloud security services including SWG, CASB, FWaaS, and DLP for consistent protection

3

**SD-WAN Security Integration**

Secure deployment of software-defined networking with embedded security controls and optimized application routing

4

**Identity-Centric Security Framework**

Development of unified identity and access policies across all users, locations, and application environments

5

**CREST-Accredited Methodology**

Industry-leading SASE approach validated by CREST's rigorous global certification standards

6

# Service Delivery Options

**Advisory & Design Services**

Expert guidance on SASE strategy, architecture planning, and transformation roadmaps tailored to your organization

**Implementation & Integration**

Comprehensive deployment services covering SD-WAN, ZTNA, cloud security, and identity management components

**Managed SASE Services**

End-to-end management of your SASE environment with 24/7 monitoring, policy administration, and continuous optimization

**Hybrid Delivery Models**

Flexible engagement options combining professional services and managed capabilities based on your specific requirements

# HIGHLIGHTS

**CREST-Certified Expertise**

Benefit from SASE services delivered by professionals meeting the highest global technical standards

**Vendor-agnostic approach**

Independent guidance across leading SASE platforms including Zscaler, Palo Alto Prisma, Cisco, Fortinet, and Cato Networks

**Regional deployment expertise**

Specialized knowledge of EMEA connectivity challenges, regulatory requirements, and geographic considerations

**Business-aligned implementation**

SASE solutions designed to enable digital transformation while enhancing security and user experience

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services across the entire region

## Trusted by EMEA Giants

Authorized security partner for leading organizations across all major sectors, including finance, energy, healthcare, manufacturing, and government

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## EMEA Network Security Leadership

Deep understanding of regional network architectures, international connectivity challenges, data sovereignty requirements, and regulatory compliance considerations across diverse EMEA jurisdictions, ensuring SASE implementations that address the unique needs of multinational organizations operating throughout Europe, the Middle East, and Africa

CIPHER

Awareness Services Data sheets

# Security Awareness Program Development Services

Building an effective security awareness culture has become essential for organizations seeking to reduce human-centric security risks. Enterprises across the Middle East struggle with designing engaging awareness programs, measuring behavioral change, and adapting content to diverse cultural contexts and regional threats. In response to these challenges, **Cipher offers comprehensive** Security Awareness Program Development services, creating customized awareness strategies and content that transform employee security behaviors, reduce human risk, and establish a resilient security culture throughout your organization.

CIPHER

# What's Included in Cipher's Security Awareness Program Development Services?

1

### Security Culture Assessment

Thorough evaluation of your organization's current security awareness maturity, knowledge gaps, and behavioral challenges

2

### Customized Program Strategy

Development of tailored awareness frameworks with defined objectives, target audiences, content themes, and delivery methods

3

### Localized Content Creation

Design of engaging awareness materials including training modules, videos, simulations, and communications in relevant languages and cultural contexts.

4

### Phishing Simulation Campaigns

Implementation of targeted phishing exercises with increasing sophistication to measure awareness effectiveness and identify high-risk groups.

5

### Metrics & Measurement Framework

Establishment of clear KPIs and assessment methods to track program effectiveness and behavioral improvements.

6

### CREST-Accredited Methodology

Industry-leading awareness approach validated by CREST's rigorous global certification standards.

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Middle East cultural adaptation

Content specifically designed for regional cultural contexts, language preferences, and social considerations

### Behavior-focused approach

Programs targeting specific security behaviors rather than generic knowledge transfer to create measurable risk reduction

### Multi-modal delivery

Diverse content formats and delivery methods to engage different learning styles and organizational roles

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

Smart City Services Data sheets

# Smart City Cybersecurity Development Services

Securing complex smart city ecosystems has become critical as urban centers across the Middle East embrace digital transformation initiatives. City authorities and developers face unprecedented challenges with protecting interconnected systems, ensuring citizen privacy, and safeguarding critical urban infrastructure against sophisticated threats. In response to these challenges, **Cipher offers comprehensive** Smart City Cybersecurity Development services, providing specialized expertise to design, implement, and maintain security frameworks that enable safe, resilient smart city deployments throughout the region.

# What's Included in Cipher's Smart City Cybersecurity Services?

**1 Smart City Security Architecture**

Development of comprehensive security frameworks spanning IoT devices, networks, data platforms, and integration points.

**2 Critical Infrastructure Protection**

Specialized security controls for essential urban systems including utilities, transportation, emergency services, and public safety

**3 IoT Security Implementation**

Secure-by-design approaches for connected devices, sensors, and edge computing deployments throughout urban environments

**4 Data Privacy & Protection**

Frameworks ensuring citizen data is collected, processed, stored, and shared according to regulatory requirements and ethical standards.

**5 Security Operations Design**

Creation of monitoring and response capabilities tailored to the unique requirements of smart city environments

**6 CREST-Accredited Methodology**

Industry-leading SIEM implementation approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Holistic ecosystem approach

Security strategies addressing the entire smart city technology stack from physical devices to applications and data analytics

### Regulatory compliance focus

Security frameworks aligned with relevant national and regional smart city standards, data protection regulations, and critical infrastructure requirements

### Public-private partnership models

Collaborative security approaches enabling effective coordination between government entities, technology providers, and service operators

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

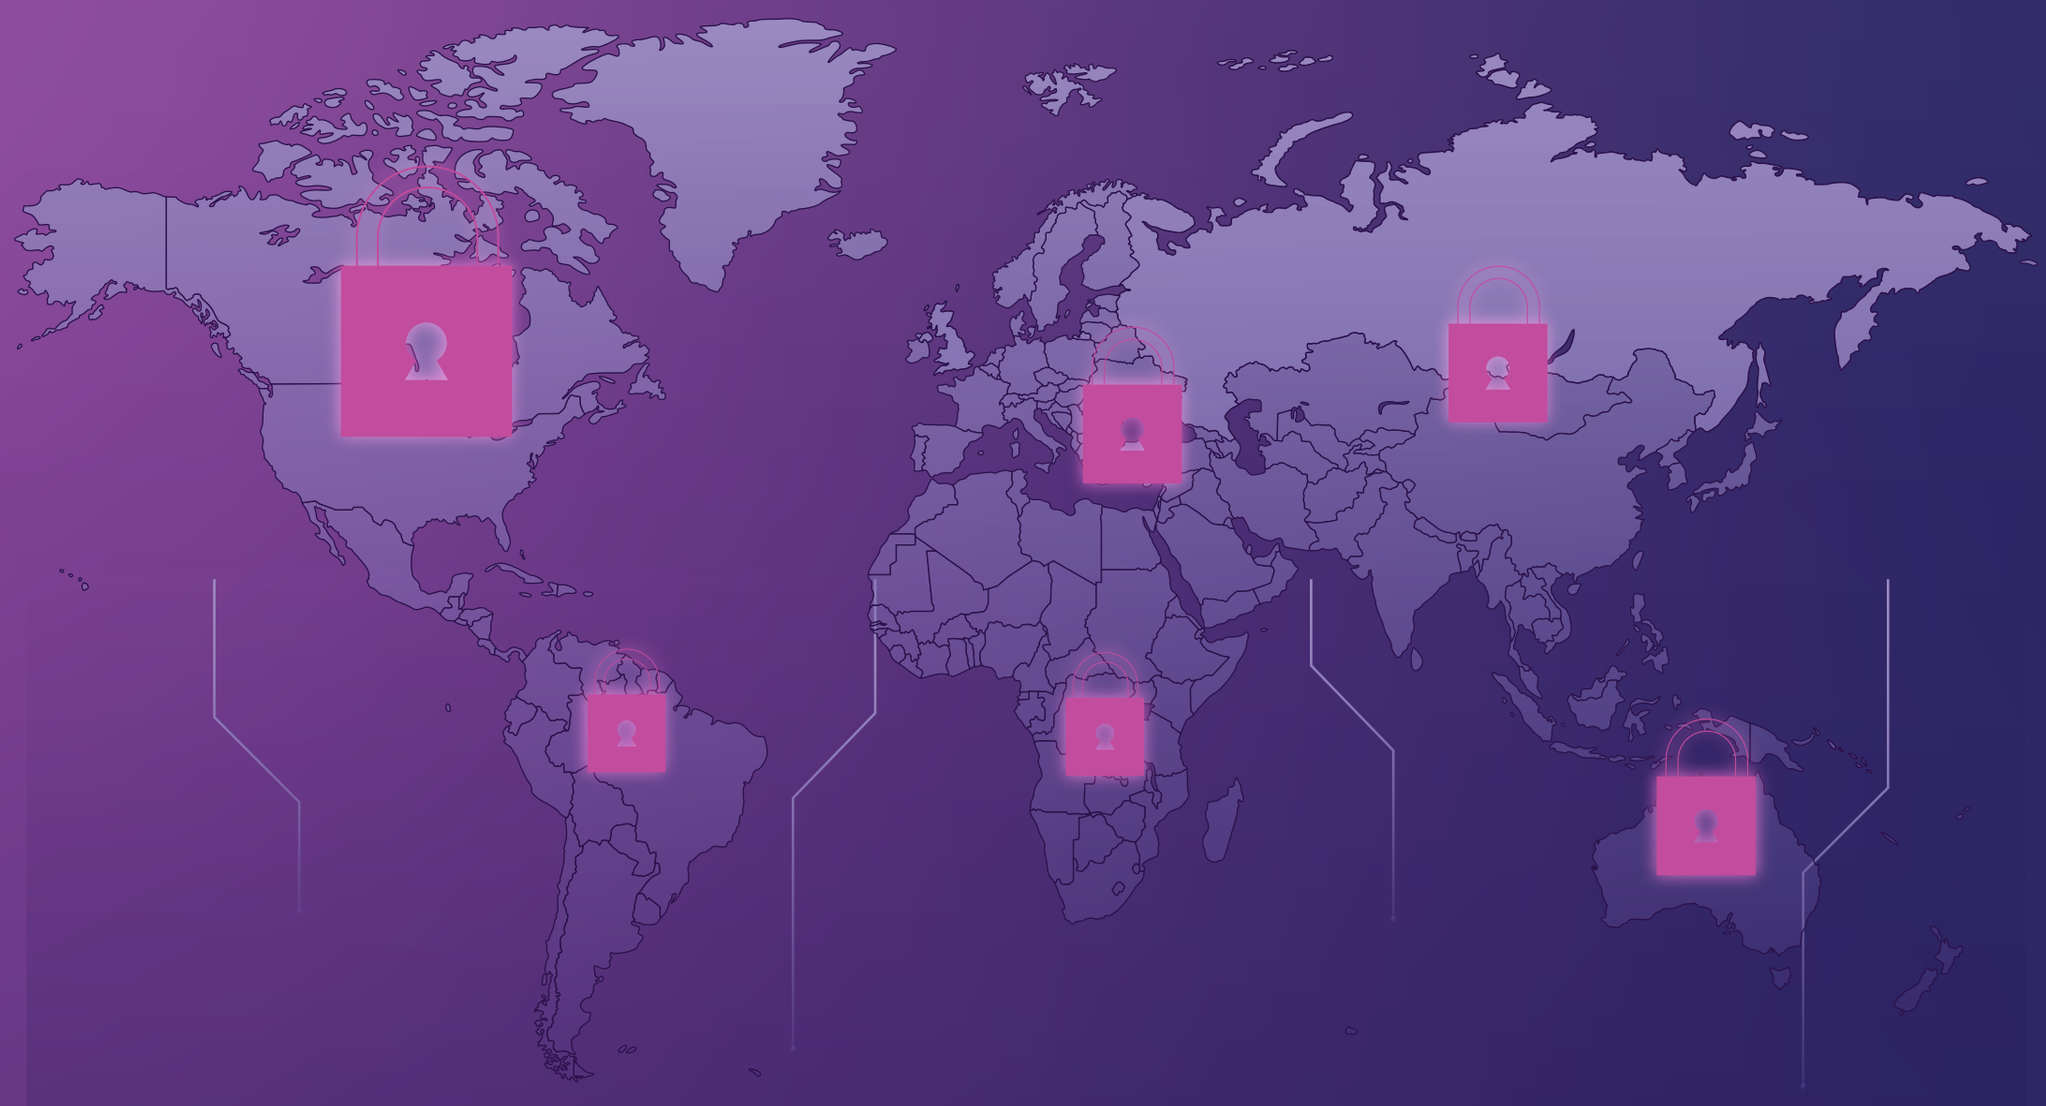
CIPHER

SOC Services Data sheets



# SOC Process, Playbook & Service Catalog Development

Building efficient, repeatable workflows is critical for modern security operations centers aiming to boost detection accuracy and reduce response time. Across the Middle East, many organizations still struggle to standardize their processes, document incident handling procedures and define service offerings that align with business requirements.

**Cipher helps bridge this gap** with end to end SOC Process, Playbook and Service Catalog Development. We deliver tailored operational frameworks that streamline activities, enhance consistency and provide clarity to all stakeholders involved in your security operations.

CIPHER

# What's Included in Cipher's SOC Process, Playbook & Service Catalog Development?

### SOC Process Framework

End to end documentation of SOC workflows, including monitoring, detection, investigation, escalation and response processes.

### Incident Response Playbooks

Step by step guides customized to your environment, detailing actions for various incident types and real-world attack scenarios.

### Service Catalog Definition

Clear descriptions of each SOC service offering—scope, SLAs, performance metrics and deliverables—aligned with your business priorities.

### RACI & Escalation Matrices

Defined roles, responsibilities, and escalation paths for incidents, categorized by severity and impact.

### Operational Templates & Artifacts

Ready-to-use templates, reports, and communication tools to ensure standardized and professional service delivery.

### CREST-Accredited Methodology

Developed using globally recognized standards from CREST, ensuring quality and reliability across all documentation.

## HIGHLIGHTS

### CREST-Certified Expertise

SOC documentation built by certified professionals, adhering to the highest international technical standards.

### Regionally Relevant Playbooks

Content tailored to threat actors and attack vectors specific to the Middle East.

### Deployment Support

Guidance on integrating processes and playbooks into your existing technology stack and operational environment.

### Continuous Improvement

Built-in mechanisms for regularly updating documentation based on threat evolution and lessons learned.

# What Makes Cipher Unique?

**Middle East's Cybersecurity Leader**
The region's first CREST-accredited provider for SOC, Penetration Testing, VA and IR services.

**Trusted by Regional Giants**
Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

**Recognized Excellence**
Named MDR leader in the Middle East by IDC, and awarded for innovation as one of the fastest-growing cybersecurity firms in the Middle East and Greece.

**Global Threat Intelligence Access**
A full member of FIRST, giving Cipher access to the latest global threat intelligence and response best practices.

**Proven Documentation Expertise**
Decades of experience delivering SOC frameworks and playbooks to some of the region's largest and most complex organizations.

SOC Services Data sheets

# SOC Use-Case Library Development Services

Implementing effective detection capabilities has become critical for security operations centers seeking to identify sophisticated threats across complex environments. Security teams across the Middle East struggle with developing comprehensive detection use cases, optimizing alert fidelity, and ensuring coverage against relevant attack techniques. In response to these challenges, **Cipher offers comprehensive** SOC Use-Case Library Development services, creating customized detection frameworks that enhance threat visibility, reduce false positives, and align monitoring capabilities with your specific threat landscape.

CIPHER

SOC Services Data sheets

# What's Included in Cipher's SOC Use-Case Library Development Services?

01

### Threat Modeling & Coverage Analysis

Thorough assessment of relevant threats and attack techniques requiring detection in your environment

02

### Use-Case Design & Documentation

Development of detailed detection use cases with clear logic, data sources, thresholds, and expected outcomes

03

### MITRE ATT&CK Mapping

Alignment of detection use cases with MITRE ATT&CK framework to ensure comprehensive coverage of adversary tactics and techniques

04

### Technology-Specific Implementation

Translation of use cases into platform-specific configurations for your SIEM, EDR, NDR, and other security tools

05

### Tuning & Optimization Guidance

Detailed procedures for refining use cases to minimize false positives while maintaining detection effectiveness

06

### CREST-Accredited Methodology

Industry-leading use-case development approach validated by CREST's rigorous global certification standards

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from detection use cases developed by professionals meeting the highest global technical standards

### Middle East threat alignment

Use cases tailored to detect tactics and techniques employed by threat actors specifically targeting regional organizations

### Multi-layer detection strategy

Comprehensive approach combining signature-based, behavioral, anomaly, and correlation-based detection methodologies

### Practical implementation focus

Use cases designed with consideration for your specific data sources, technology limitations, and operational capabilities

# What Makes Cipher Unique?

CIPHER

# Social Engineering Assessment Services

Understanding human security vulnerabilities has become critical as organizations across the Middle East face increasingly sophisticated social engineering attacks targeting employees at all levels. Enterprises struggle with identifying susceptibility to manipulation tactics, building effective awareness programs, and creating a security culture resistant to psychological exploitation. In response to these challenges, **Cipher offers comprehensive** Social Engineering Assessment services, providing specialized expertise to evaluate human security vulnerabilities, conduct realistic simulations, and develop targeted mitigation strategies tailored to your organization's unique cultural context.

CIPHER

# What's Included in Cipher's Social Engineering Assessment Services?

**1**

### Customized Social Engineering Campaigns

Development of tailored scenarios relevant to your industry, organizational structure, and regional context

**2**

### Phishing Simulation Programs

Multi-phase email campaigns testing employee susceptibility to various phishing tactics with detailed response analytics

**3**

### Voice Phishing (Vishing) Assessments

Telephone-based social engineering exercises targeting specific roles and departments within your organization

**4**

### Physical Social Engineering

On-site assessments evaluating physical security controls, access procedures, and staff compliance with security policies

**5**

### Spear Phishing Exercises

Targeted campaigns against executives and high-value personnel using sophisticated, research-driven approaches

**6**

### CREST-Accredited Methodology

Industry-leading social engineering approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from social engineering assessments delivered by professionals meeting the highest global technical standards

### Culturally-sensitive approach

Testing methodologies adapted to Middle Eastern business environments, organizational hierarchies, and cultural considerations

### Multi-vector campaigns

Comprehensive assessment combining email, phone, text messaging, physical, and social media manipulation techniques

### Targeted awareness development

Customized training recommendations based on specific vulnerabilities identified during assessment activities

Staff Augmentation Services Data sheets

# Staff Augmentation Services

Addressing cybersecurity talent shortages has become critical as organizations across Europe, the Middle East, and Africa face increasing difficulties recruiting, retaining, and developing specialized security personnel. Enterprises struggle with lengthy hiring cycles, skills gaps in key security domains, and insufficient resources to manage growing security demands. In response to these challenges, Cipher offers comprehensive Staff Augmentation Services, providing highly-qualified security professionals to seamlessly integrate with your team, enhance your security capabilities, and support critical security initiatives across the EMEA region

CIPHER

Staff Augmentation Services Data sheets

# What's Included in Cipher's Staff Augmentation Services?

**1**

### Specialized Security Expertise

Access to skilled professionals across diverse security domains including SOC operations, incident response, security engineering, cloud security, and GRC.

**2**

### Flexible Engagement Models

Customizable staffing solutions ranging from short-term project support to long-term embedded resources based on your specific requirements

**3**

### Dedicated Resource Management

Comprehensive oversight of augmented staff with performance tracking, quality assurance, and continuous skills development

**4**

### Knowledge Transfer Framework

Structured approach for capability building, ensuring skills and expertise are effectively transferred to your internal teams

**5**

### Cross-Regional Resource Coordination

Ability to deploy security professionals across multiple EMEA locations with consistent quality and standardized methodologies

**6**

### CREST-Accredited Professionals

Industry-leading security experts validated by CREST's rigorous global certification standards

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from security professionals meeting the highest global technical standards and certifications

### Rapid resource deployment

Streamlined onboarding processes reducing time-to-productivity for augmented staff across all EMEA regions

### Skills-matched resourcing

Precise alignment of professional expertise with your specific security requirements and technology environments

### Continuous capability development

Ongoing training and certification programs ensuring augmented staff maintain cutting-edge security knowledge

# KEY SECURITY ROLES AVAILABLE

### Security Operations Analysts

SOC analysts at all tiers, threat hunters, security monitoring specialists, and incident handlers

### Security Engineering Specialists

Network security engineers, cloud security architects, security automation experts, and DevSecOps professionals

### Governance & Compliance Experts

Risk managers, compliance specialists, security assessors, and privacy professionals with regional regulatory expertise

### Security Leadership Resources

Virtual CISO services, security program managers, and strategic security advisors with executive experience

Third–Party Services Data sheets

# Third–Party Cybersecurity Development Program Services

Managing supply chain security has become critical as organizations across the Middle East face increasing risks from third–party relationships, vendor security gaps, and interconnected digital ecosystems. Enterprises struggle with elevating supplier security capabilities, ensuring consistent standards across their partner ecosystem, and reducing risk exposure from third–party connections. In response to these challenges, Cipher offers comprehensive Third–Party Cybersecurity Development Program services, providing specialized expertise to assess, develop, and mature the security capabilities of your key suppliers, partners, and service providers

CIPHER

# What's Included in Cipher's Third-Party Cybersecurity Development Program Services?

1

### Supplier Security Assessment Framework

Development of customized evaluation methodology aligned with your risk tolerance, regulatory requirements, and industry standards

2

### Security Capability Maturity Modeling

Comprehensive evaluation of supplier security programs with detailed maturity scoring across key security domains

3

### Targeted Improvement Roadmaps

Creation of actionable security enhancement plans for third parties with prioritized recommendations and implementation guidance

4

### Security Requirement Standardization

Development of clear, defensible security standards and controls required for various supplier categories and risk levels

5

### Supplier Security Training Programs

Design and delivery of customized security education for third-party personnel aligned with your specific security expectations

6

### CREST-Accredited Methodology

Industry-leading third-party security approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from third-party security delivered by professionals meeting the highest global technical standards

### Risk-based supplier segmentation

Tailored assessment and development approaches based on supplier criticality, data access, and integration level

### Collaborative improvement framework

Partnership-oriented methodology focused on sustainable capability building rather than punitive compliance

### Continuous progress measurement

Structured metrics and validation processes to track supplier security enhancements and program effectiveness

AI Services Data sheets

# Trusted AI Platform

The proliferation of public AI tools has created significant security challenges as organizations across the Middle East struggle with controlling AI usage, protecting sensitive data, and ensuring policy compliance. Enterprises face critical risks when employees use public large language models and AI services without proper governance, potentially exposing confidential information or violating regulatory requirements. In response to these challenges, **Cipher offers the Secure** AI Gateway Platform, providing a comprehensive solution to enable secure, controlled AI utilization

CIPHER

# What's Included in Cipher's Trusted AI Platform?

1

### Centralized AI Access Control

Unified gateway providing managed access to approved AI tools with granular permission controls and user authentication.

2

### Policy-Based Data Protection

Automated enforcement of organizational policies with content filtering, data masking, and PII redaction for AI interactions.

3

### Comprehensive Activity Monitoring

Complete visibility into all AI interactions with detailed logging, conversation history, and usage analytics

4

### Private LLM Deployment Options

On-premises large language model capabilities for sensitive operations requiring air-gapped processing

5

### Security Integration Framework

Native connectors for SIEM systems, DLP platforms, and security tools for seamless security ecosystem integration

6

### CREST-Accredited Security

Industry-leading AI security approach validated by CREST's rigorous global certification standards

# Deployment Options

1

### SaaS Deployment

Cloud-based gateway with rapid implementation, automatic updates, and simplified management for organizations seeking operational efficiency

2

### On-Premises Deployment

Self-contained installation within your infrastructure for maximum data control, regulatory compliance, and security requirements

3

### Hybrid Architecture

Flexible combination of cloud and on-premises components based on specific data sensitivity and operational requirements

# HIGHLIGHTS

### CREST-Certified Expertise

Benefit from AI governance built by professionals meeting the highest global technical standards.

### Frictionless user experience

Seamless access to AI capabilities through familiar interfaces while enforcing security controls behind the scenes

### Real-time policy enforcement

Dynamic application of security rules preventing sensitive data exposure before it occurs.

### Customizable compliance frameworks

Tailored policy templates addressing regional regulations, industry requirements, and organizational standards

# Use-Case Management Services

Developing effective security monitoring has become critical as organizations across the Middle East struggle with prioritizing detection scenarios, tuning alert fidelity, and ensuring coverage against relevant threats. Security teams face challenges with building use-cases aligned with their specific risk profile, optimizing detection coverage, and maintaining an evolving library of detection rules. In response to these challenges, **Cipher offers comprehensive** Use-Case Management services, providing specialized expertise to design, implement, and continuously optimize security monitoring use-cases tailored to your organization's unique threat landscape and technology environment.

CIPHER

# What's Included in Cipher's Use-Case Management Services?

1

### Use-Case Assessment & Gap Analysis

Comprehensive evaluation of existing detection capabilities, coverage gaps, and alignment with relevant threat scenarios

2

### Custom Use-Case Development

Creation of tailored detection rules and monitoring scenarios specific to your industry, technology stack, and risk profile

3

### SIEM & XDR Content Engineering

Implementation of optimized detection content across security monitoring platforms with validation testing and performance tuning

4

### Use-Case Lifecycle Management

Continuous review, refinement, and retirement processes ensuring detection content remains effective and efficient.

5

### Threat-Aligned Detection Framework

Development of a structured approach to use-case management based on the MITRE ATT&CK framework and regional threat intelligence

6

### CREST-Accredited Methodology

Industry-leading use-case development approach validated by CREST's rigorous global certification standards

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from use-case management delivered by professionals meeting the highest global technical standards

### Targeted detection strategy

Use-cases prioritized based on threat relevance, potential impact, and alignment with your specific security objectives.

### Performance-optimized implementation

Detection content engineered for efficient processing, minimal false positives, and compatibility with your security tools

### Continuous effectiveness measurement

Regular validation testing and tuning to ensure use-cases maintain detection capabilities as threats and environments evolve.

# What Makes Cipher Unique?

## Middle East's Premier Cybersecurity Leader

The region's first CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services.

## Trusted by Regional Giants

Authorized audit firm for Saudi Aramco, SABIC, and STC, with extensive experience securing critical national infrastructure

## Industry Recognition

Recognized as MDR Middle East leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company in the Middle East and Greece.

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Regional Threat Intelligence Integration

Use-cases informed by Cipher's proprietary threat intelligence focusing on actors and campaigns specifically targeting Middle Eastern organizations, ensuring detection content is relevant to the actual threats your organization faces in the region.

CIPHER

# Zero Trust Security Services

Implementing zero trust architecture has become critical as organizations across Europe, the Middle East, and Africa face evolving threats, distributed workforces, and complex hybrid environments. Enterprises struggle with transforming legacy security models, implementing consistent identity-based controls, and securing diverse technological ecosystems. In response to these challenges, Cipher offers comprehensive Zero Trust Security Services, providing specialized expertise to design, implement, and operationalize zero trust frameworks tailored to your organization's unique requirements across the EMEA region.

CIPHER

## What's Included in Cipher's SASE Services?

**1**

### Zero Trust Maturity Assessment

Comprehensive evaluation of your current security posture against zero trust principles with detailed gap analysis and maturity scoring

**2**

### Zero Trust Architecture Design

Development of tailored security architectures implementing "never trust, always verify" principles across all technology domains

**3**

### Identity-Centric Security Implementation

Deployment of advanced identity and access management systems as the foundation for zero trust controls

**4**

### Micro-Segmentation Strategy

Design and implementation of network segmentation approaches limiting lateral movement and containing potential breaches

**5**

### Continuous Monitoring Framework

Establishment of real-time visibility systems providing context-aware security telemetry across all environments

**6**

### CREST-Accredited Methodology

Industry-leading zero trust approach validated by CREST's rigorous global certification standards

## Zero Trust Service Portfolio

**1**

### Zero Trust Strategy & Roadmap

Executive-level guidance on zero trust transformation with practical implementation strategies and phased approach

**2**

### Technical Implementation Services

Hands-on deployment of zero trust technologies including identity systems, ZTNA, micro-segmentation, and endpoint controls

**3**

### Zero Trust Governance Program

Development of policies, procedures, and governance structures supporting sustainable zero trust operations.

**4**

### Zero Trust Security Operations

Design and implementation of monitoring, detection, and response capabilities aligned with zero trust principles

## HIGHLIGHTS

### CREST-Certified Expertise

Benefit from zero trust services delivered by professionals meeting the highest global technical standards

### Business-aligned approach

Zero trust implementations designed to enhance security while enabling business agility and user productivity

### Cross-domain implementation

Comprehensive services spanning identity, network, application, data, and infrastructure security domains

### Regional compliance integration

Zero trust architectures designed to address specific EMEA regulatory requirements and data protection mandates

# What Makes Cipher Unique?

## EMEA's Premier Cybersecurity Leader

CREST-Accredited provider for SOC, Penetration Testing, Vulnerability Assessment, and Incident Response services across the entire region.

## Trusted by EMEA Giants

Authorized security partner for leading organizations across all major sectors, including finance, energy, healthcare, manufacturing, and government

## Industry Recognition

Recognized as a leader by IDC and recipient of cybersecurity innovation awards as the fastest-growing cybersecurity company across EMEA

## FIRST Organization Full Member

Part of the global Forum of Incident Response and Security Teams, ensuring access to the latest threat intelligence and best practices.

## Practical Zero Trust Experience

Extensive real-world implementation experience across diverse EMEA environments, delivering pragmatic zero trust transformations that address the unique challenges of multinational organizations operating across different regulatory jurisdictions, technology landscapes, and security maturity levels throughout Europe, the Middle East, and Africa.
